TOPIC OUTLINE

do-while Loop

DO-WHILE LOOP

The do-while loop **repeats** the statement while the condition is **true**

```
do {
    statement
} while (condition);
```

If the condition is **no longer true**, the loop ends

WHILE vs DO-WHILE

```
while (condition) {
    statement
}
```

```
do {
    statement
} while (condition);
```

condition is evaluated first

then the **statement**

statement is executed first

then the **condition** is evaluated

WHILE vs DO-WHILE

```
int n = 0;

while (n != 0) {

    cout<< n;

    n--;

}
```

output:

```
int n = 0;

do {

    cout<< n;

} while (n != 0);
```

output: 0

```
int start = 5;

int end = 20;

do{

        if(start%2 == 0){

            cout<<start<<", ";

        }

        start++;

}while(start < end+1);
```
