TOPIC OUTLINE

Parabola with Vertex at the Origin

Directrix is along the $x - axis$

Directrix is along the $y - axis$

Parabola with Vertex at $V(h, k)$

Directrix is along the $x - axis$

Directrix is along the $y - axis$

PARABOLA WITH VERTEX AT THE ORIGIN

A **parabola** is the set of all points in a plane **equidistant** from a fixed point F (the **focus**) and a fixed line l (the **directrix**) that lie in the plane.

$$d(P, F) = d(P, P')$$

VERTEX AT THE ORIGIN

vertex,

$V(0, 0)$

focus,

$F(0, p)$

Standard Equation,

$$x^2 = 4p\,y$$

directrix,

$y = -p$

DIRECTRIX is along the $x - axis$

Standard Equation,

$$x^2 = 4p\,y$$

vertex, $V(0, 0)$

focus, $F(0, p)$

directrix, $y = -p$

Find the **focus** and **directrix** of the parabola $y = \frac{1}{6}x^2$, and **sketch** its graph

Find the **focus** and **directrix** of the parabola $y = -\frac{1}{6}x^2$, and **sketch** its graph

DIRECTRIX is along the $y - axis$

Standard Equation,

$$y^2 = 4p\,x$$

vertex, $V(0, 0)$

focus, $F(p, 0)$

directrix, $x = -p$

Find an **equation** of a parabola that has vertex at the origin, **opens right**, and passes through the point $\boldsymbol{P(7, -3)}$.

Find an **equation** of a parabola that has vertex at the origin, **opens left**, and passes through the point $\boldsymbol{P(-7,-3)}$.

PARABOLA WITH VERTEX AT $V(h, k)$

VERTEX AT THE ORIGIN

vertex,

$V(0, 0)$

VERTEX AT $V(h, 0)$

moving h units along the x-axis

VERTEX AT $V(0, k)$

moving k units along the y-axis

VERTEX AT $V(h, k)$

moving

h units along the x-axis

and

k units along the y-axis

focus,

$F(h, k + p)$

Standard Equation,

$$(x-h)^2 = 4p(y-k)$$

directrix,

$y = k - p$

DIRECTRIX is along the $x - axis$

Standard Equation,

$$(x-h)^2 = 4p(y-k)$$

vertex, $V(h, k)$

focus, $F(h, k+p)$

directrix, $y = k - p$

A parabola has vertex $V(-4, 2)$ and directrix $y = -5$. Express the equation of the parabola in the form $y = ax^2 + bx + c$.

A parabola has vertex $V(-4, 2)$ and directrix $y = 5$. Express the equation of the parabola in the form $y = ax^2 + bx + c$.

DIRECTRIX is along the $y - axis$

Standard Equation,

$$(y-k)^2 = 4p(x-h)$$

vertex, $V(h,k)$

focus, $F(h+p,k)$

directrix, $x = h - p$

Sketch the graph of $2x = y^2 + 8y + 22$.

Sketch the graph of $-2x = y^2 + 8y + 22$.

SEATWORK

1. Find the **vertex**, **focus**, and **directrix** of the parabola $(x-3)^2 = \frac{1}{2}(y+1)$.

2. Find the **equation** of the parabola that has vertex at the **origin**, **symmetric** to the $y-axis$, and passing through the point $(2, -3)$.

3. A reflector is to be constructed with a **focal** length of **10** feet and a **depth** of **5** feet. Find the **radius** of the reflector.
