TOPIC OUTLINE

Ellipse with Center at the Origin

Major axis is on the $x - axis$

Major axis is on the $y - axis$

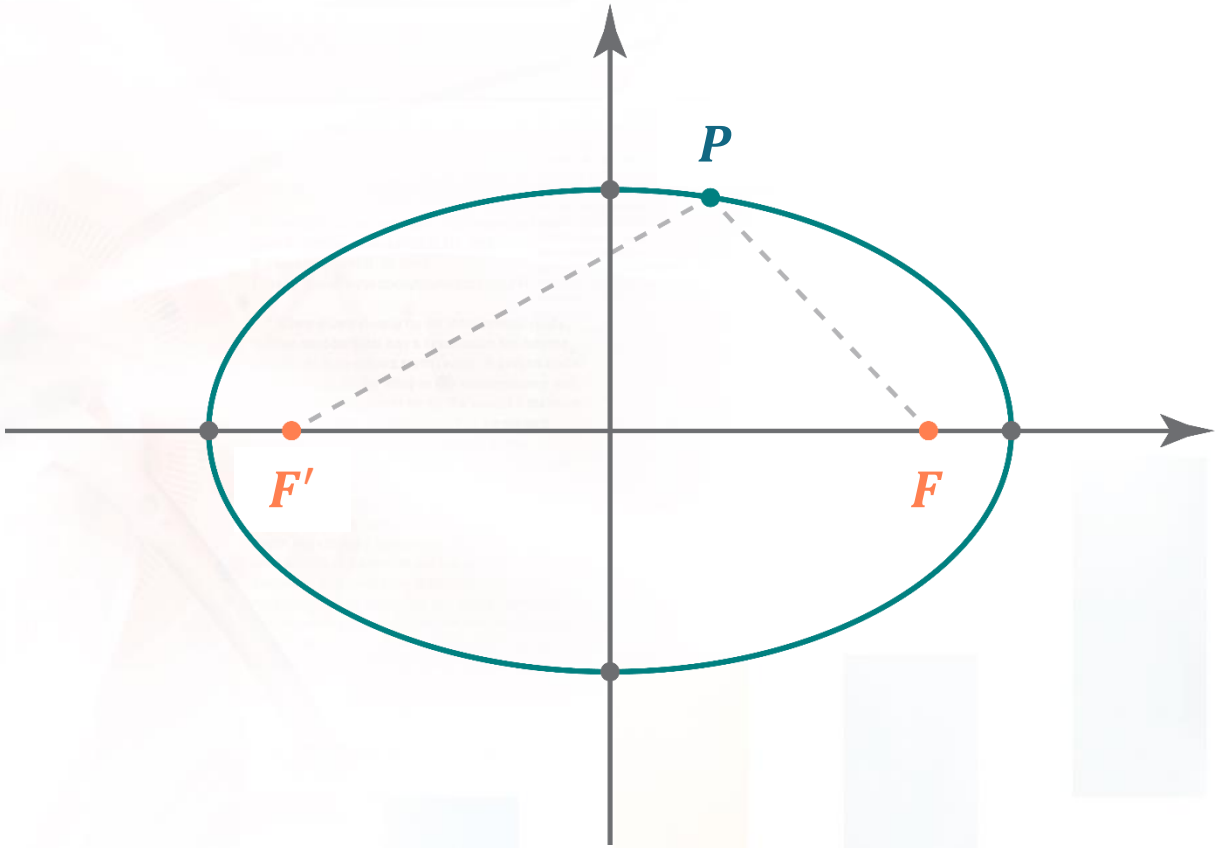
Ellipse with Center at $V(h, k)$

Major axis is along the $x - axis$

Major axis is along the $y - axis$

ELLIPSE WITH CENTER AT THE ORIGIN

An **ellipse** is the set of all points in a plane, the **sum** of whose **distances** from two fixed points (the **foci**) in the plane is a positive **constant** ($2a$).

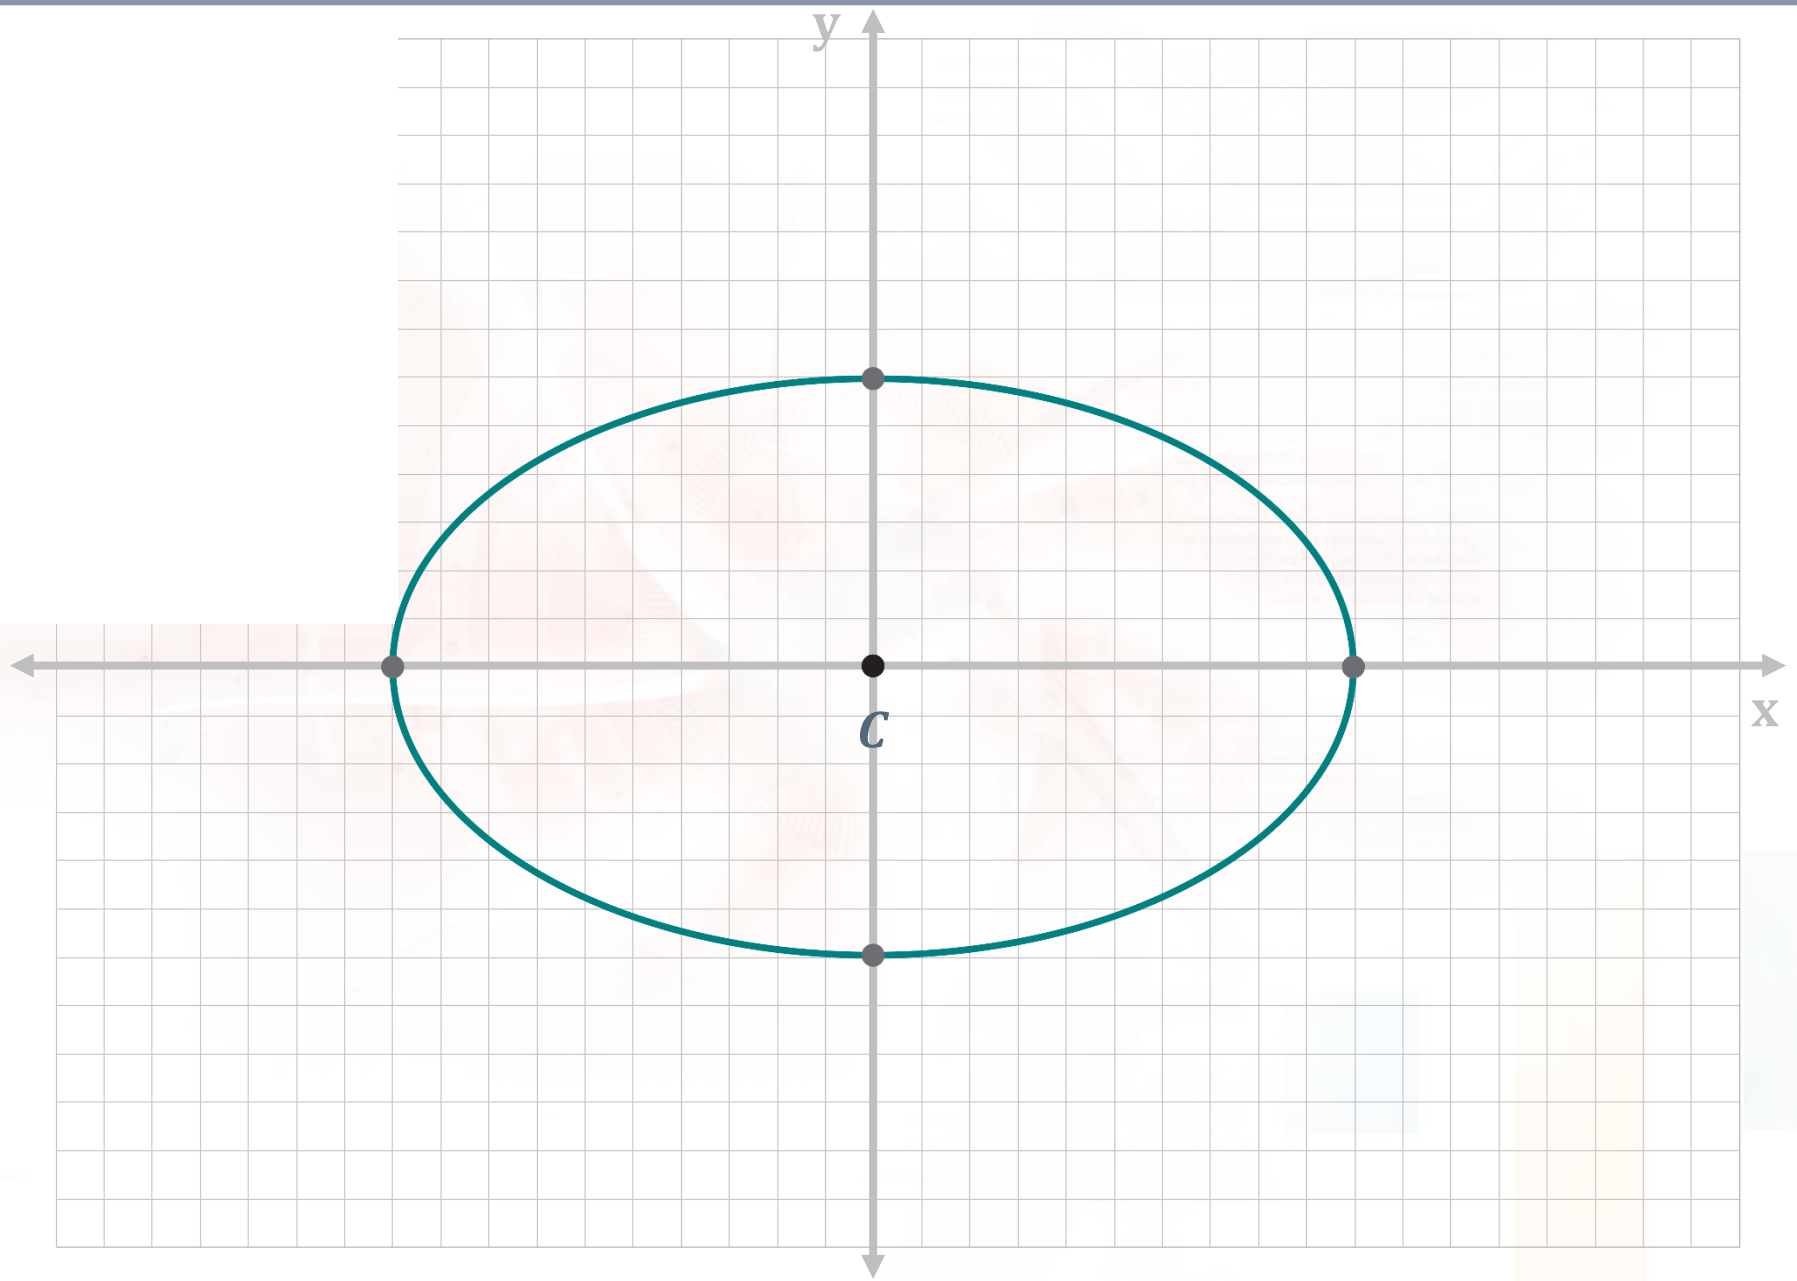


$$d(P, F) + d(P, F') = 2a$$

CENTER AT THE ORIGIN

center,

$C(0, 0)$



VERTICES

vertices,

$V(\pm a, 0)$

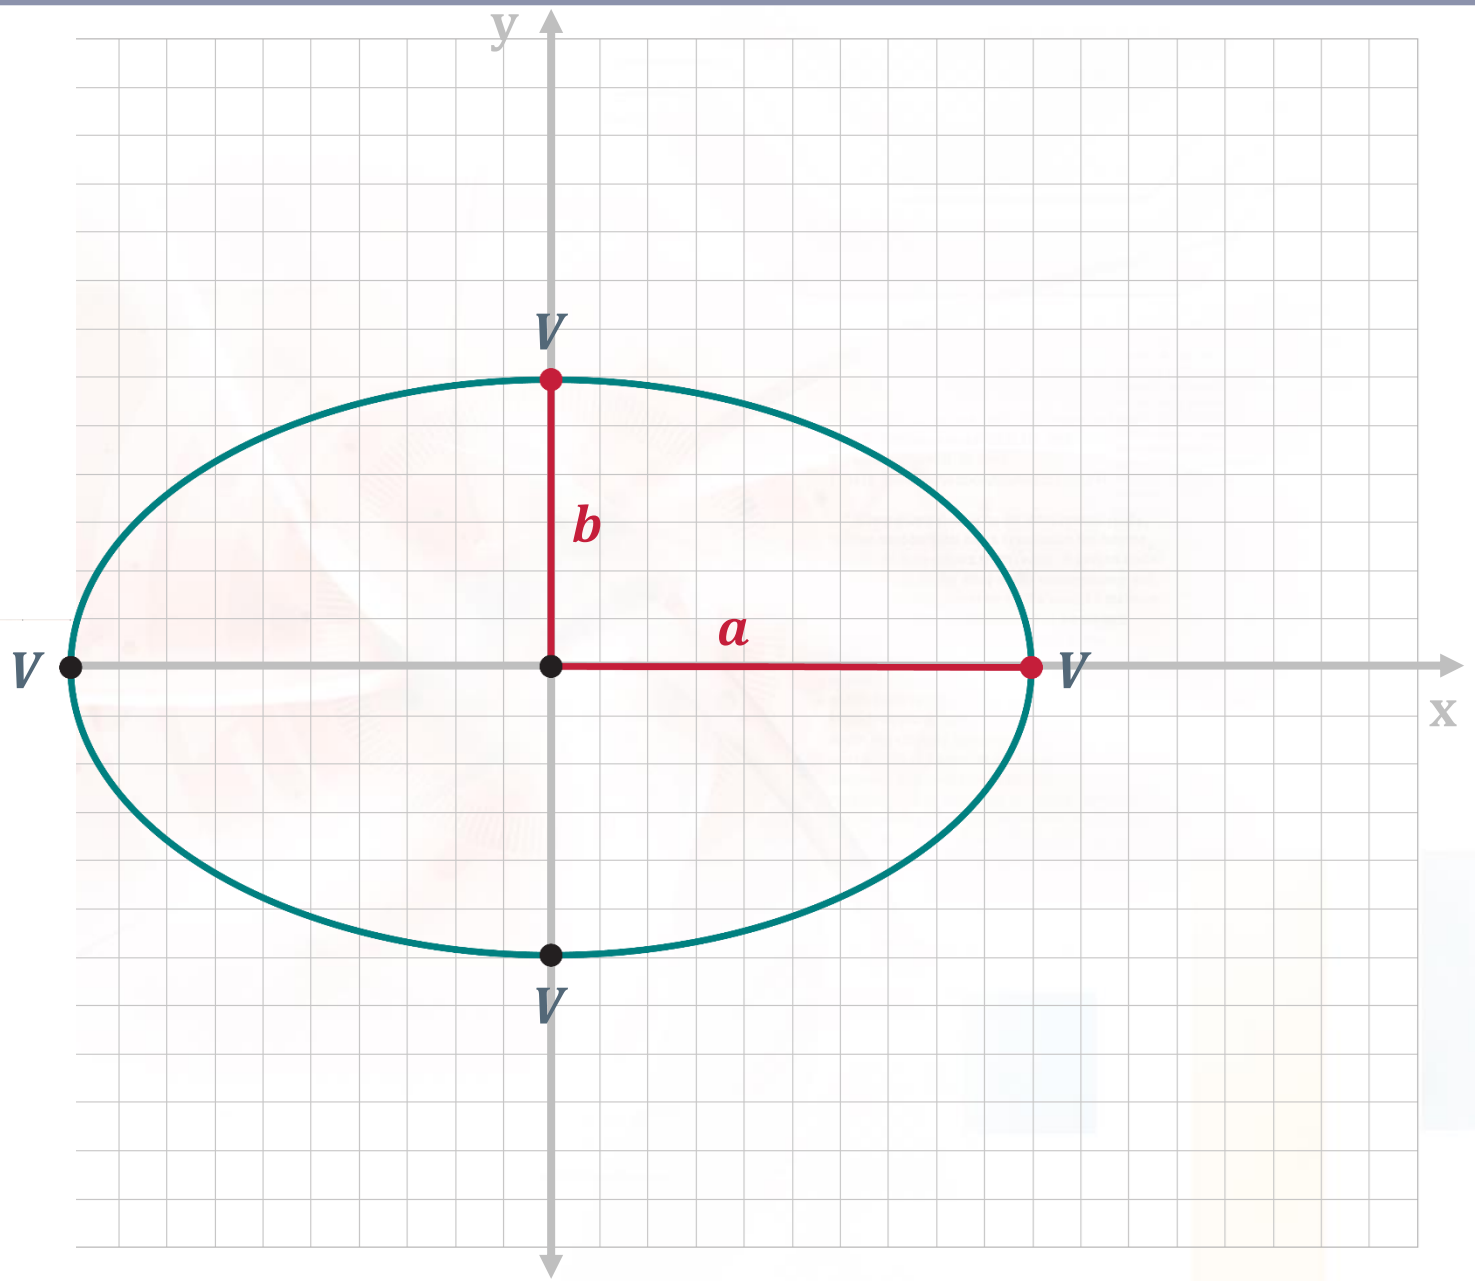
$V(0, \pm b)$

major axis,

$2a$

minor axis,

$2b$

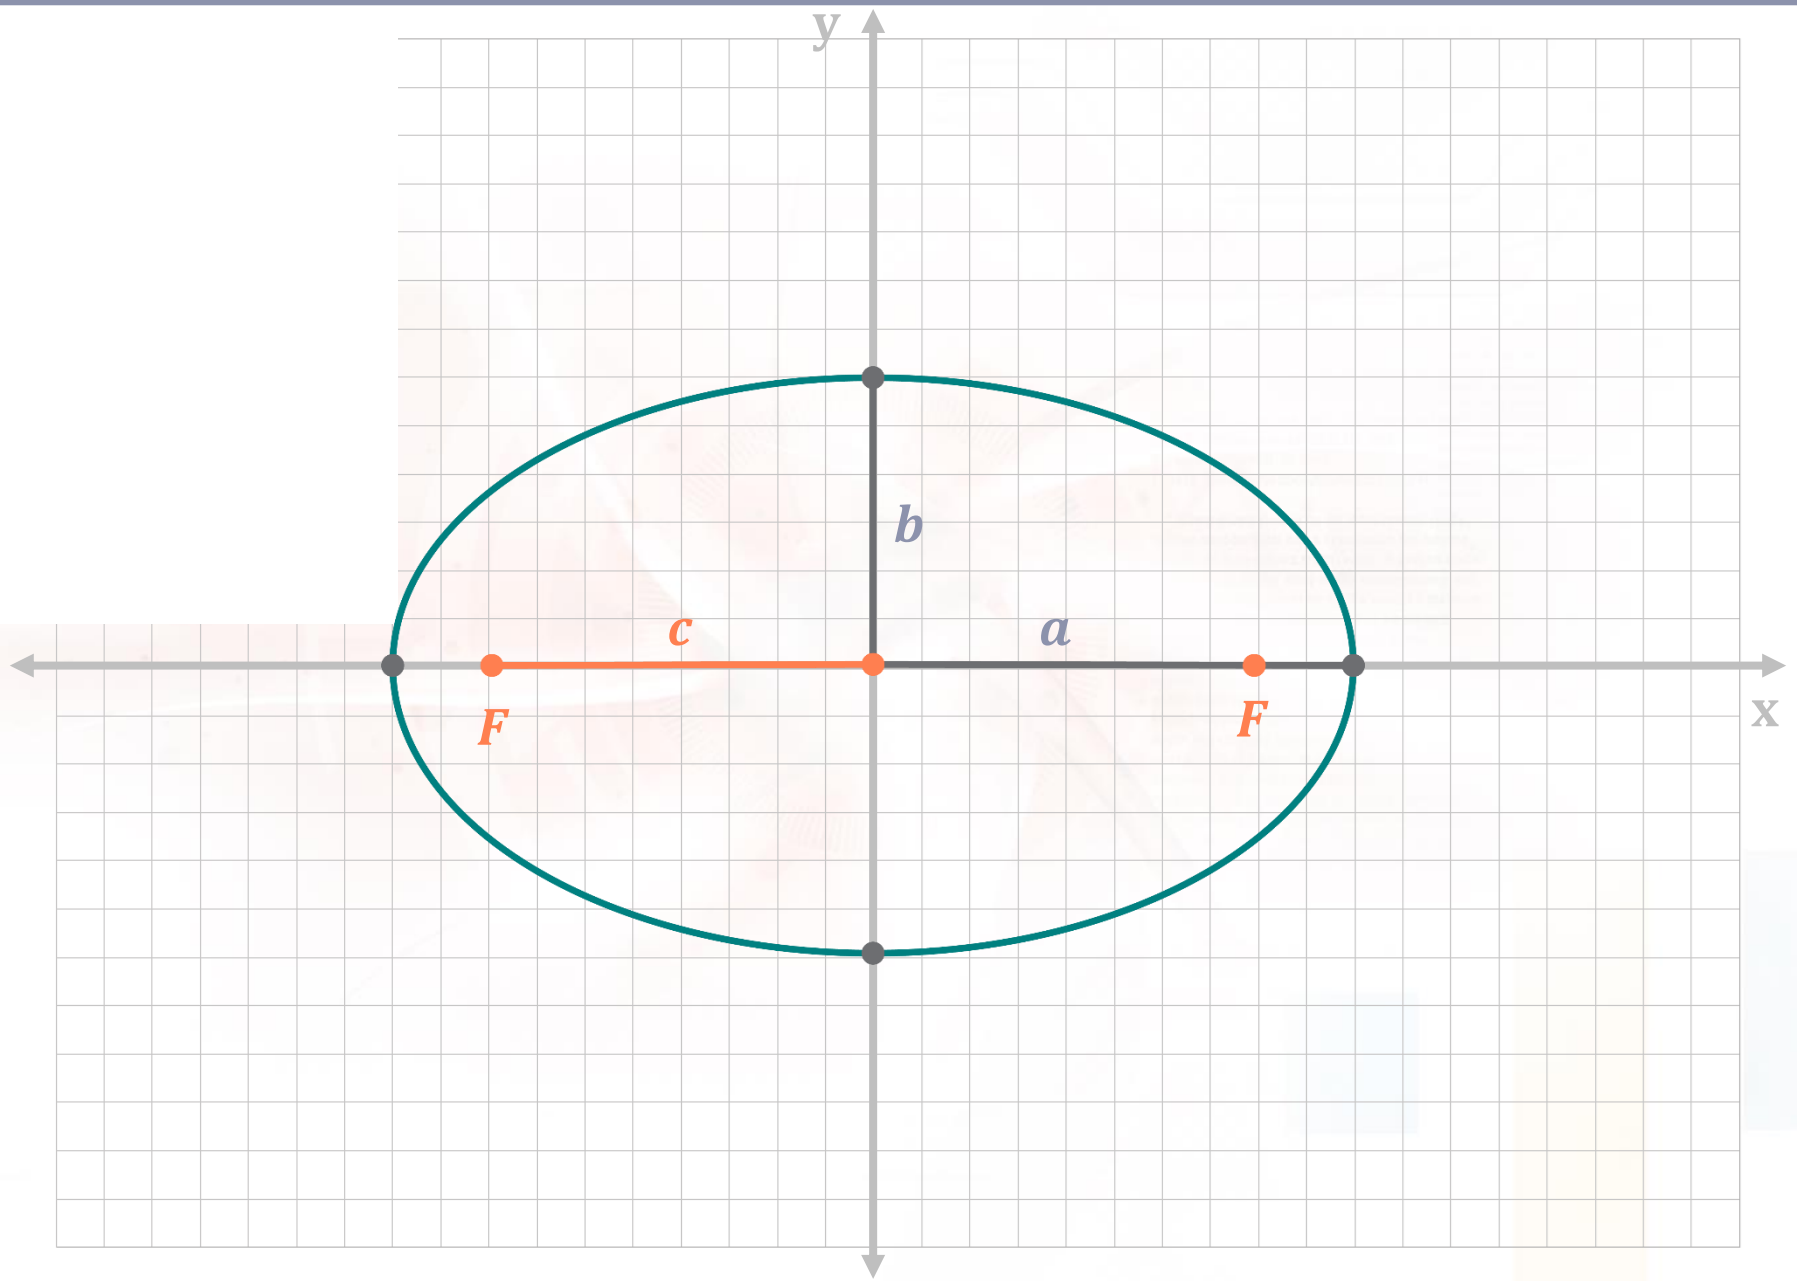


FOCI

foci,

$F(\pm c, 0)$

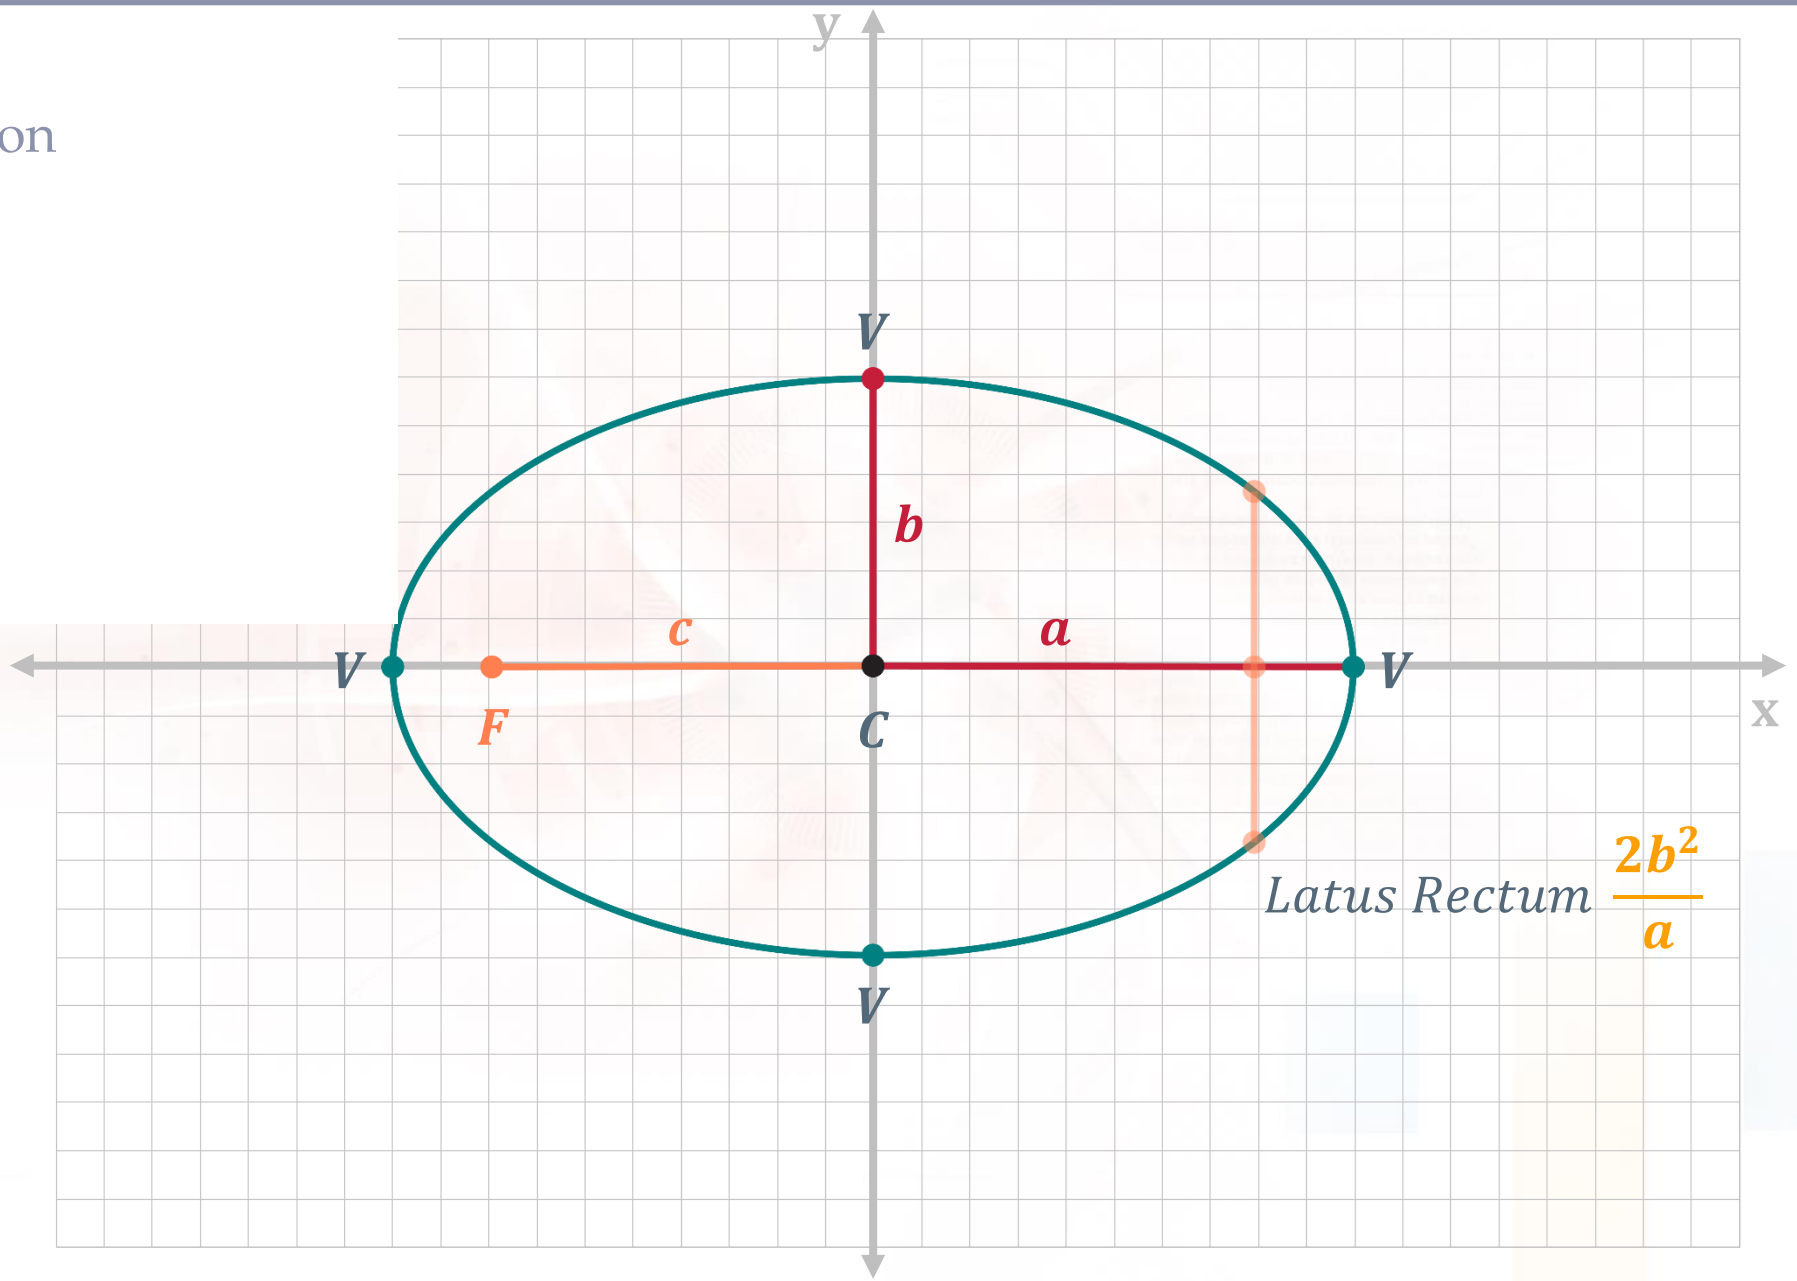
$c^2 = a^2 - b^2$



Standard Equation

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

$$c^2 = a^2 - b^2$$



MAJOR AXIS is on the $x - axis$

Standard Equation

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

$$c^2 = a^2 - b^2$$

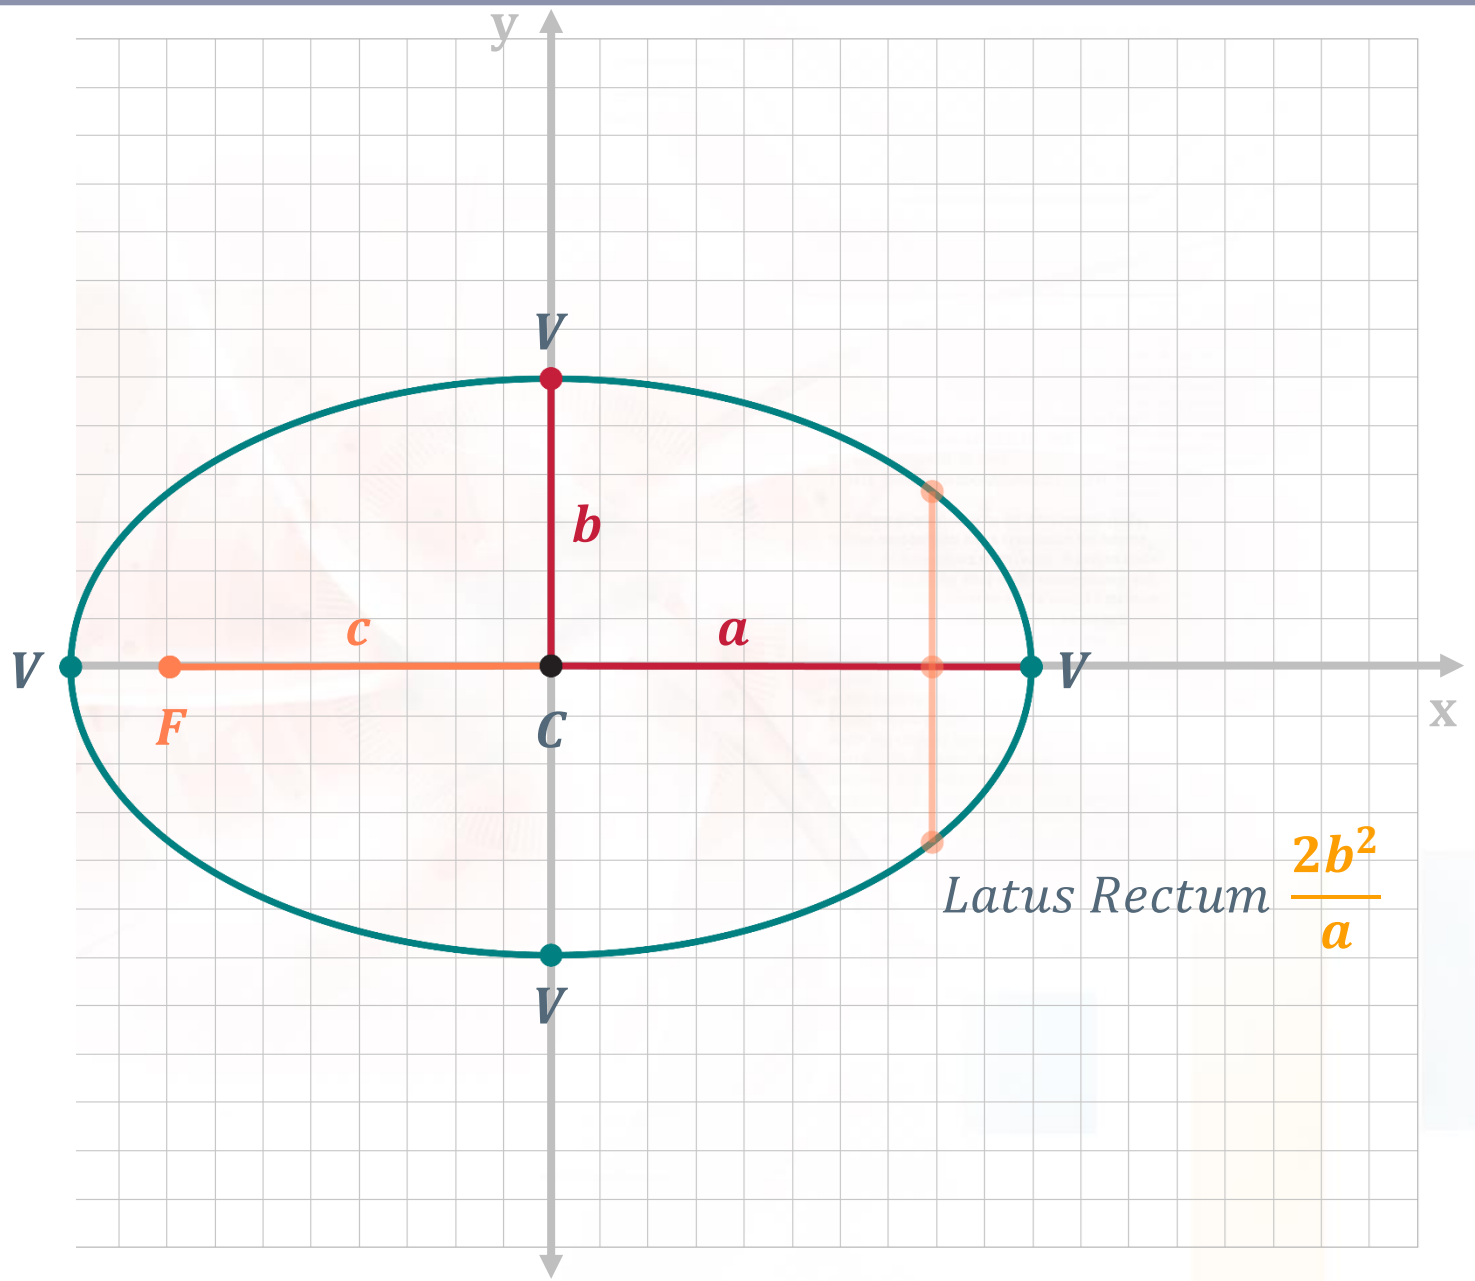
center, $C(0, 0)$

vertices, $V(\pm a, 0)$, $V(0, \pm b)$

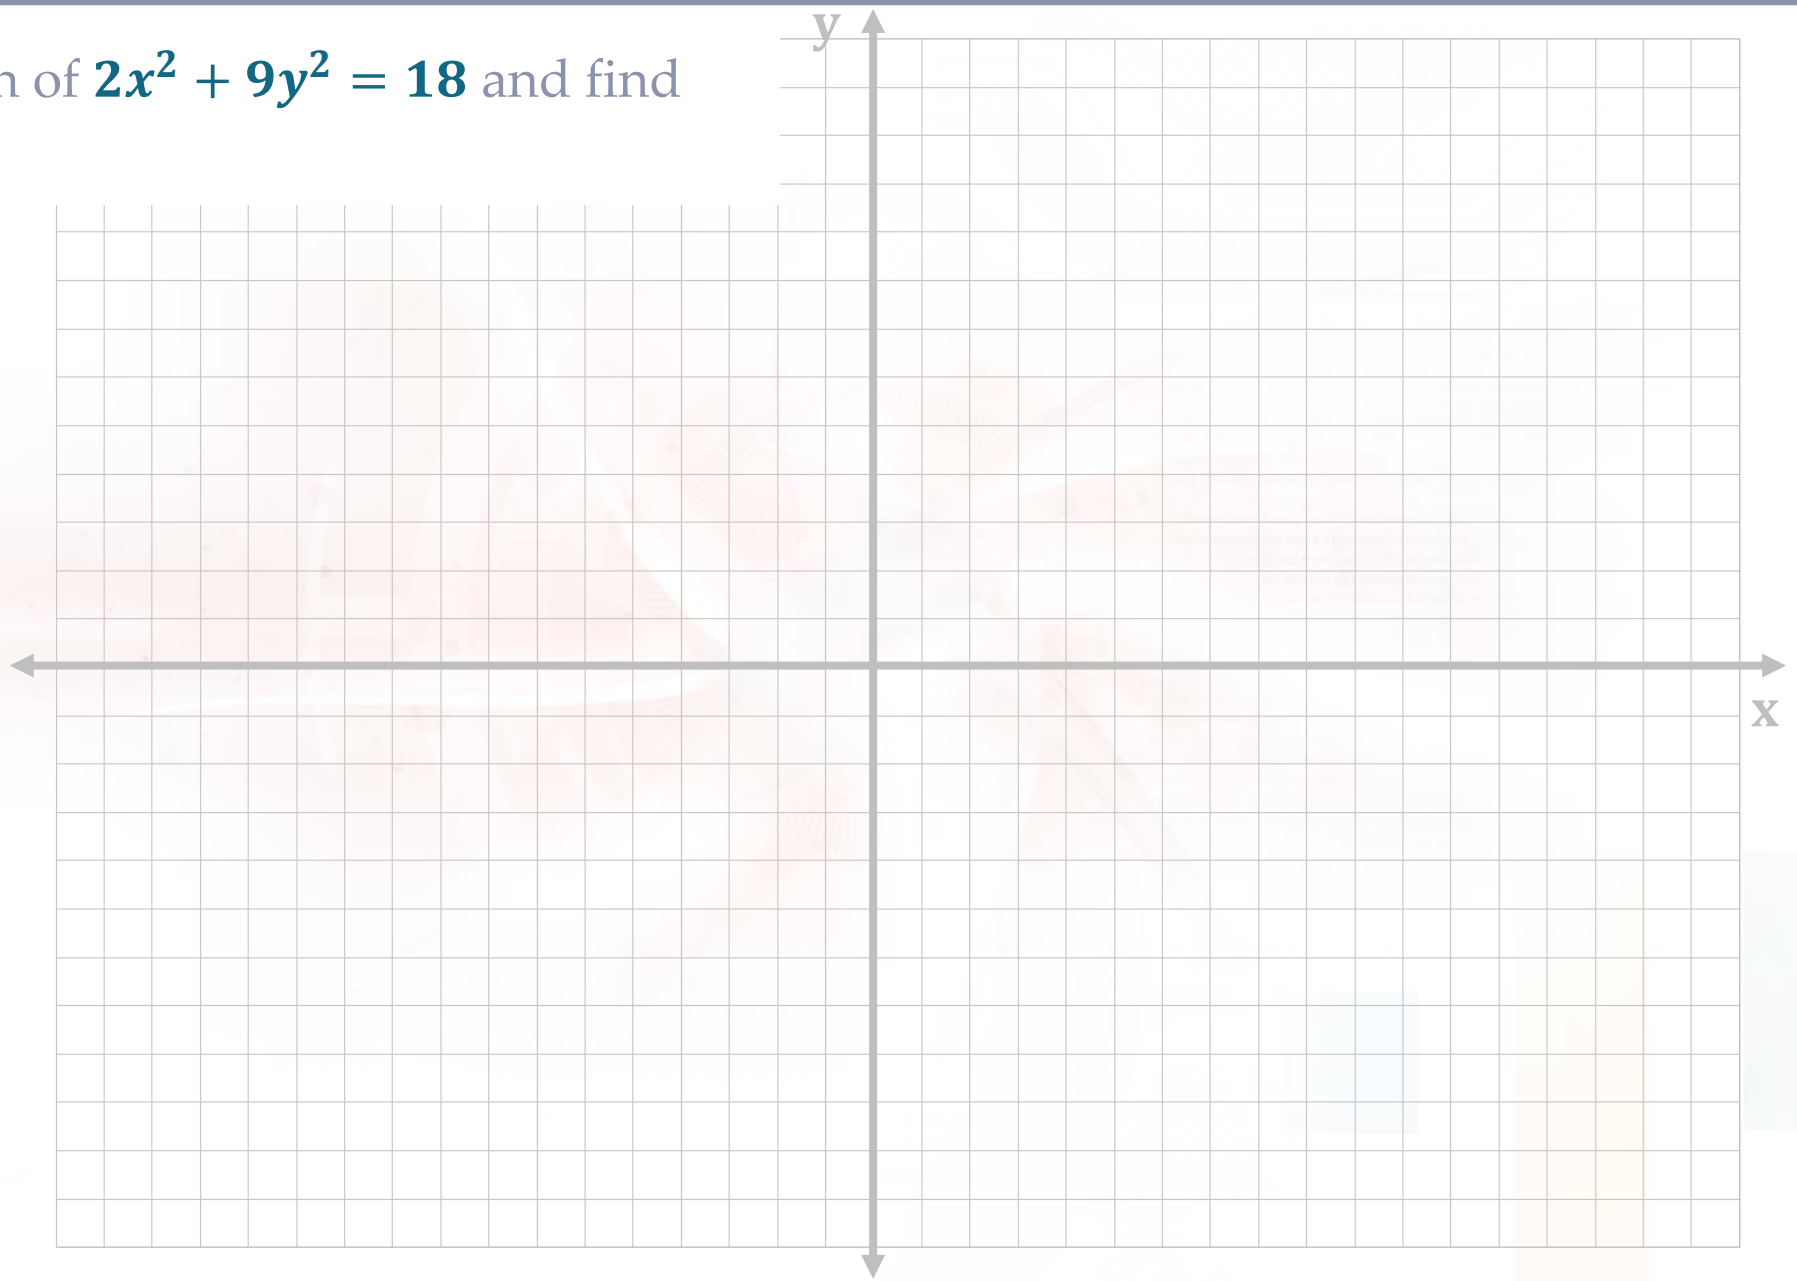
foci, $F(\pm c, 0)$

major axis, $2a$

minor axis, $2b$



Sketch the graph of $\mathbf{2x^2 + 9y^2 = 18}$ and find the **foci**.



MAJOR AXIS is on the $y - axis$

Standard Equation

$$\frac{x^2}{b^2} + \frac{y^2}{a^2} = 1$$

$$c^2 = a^2 - b^2$$

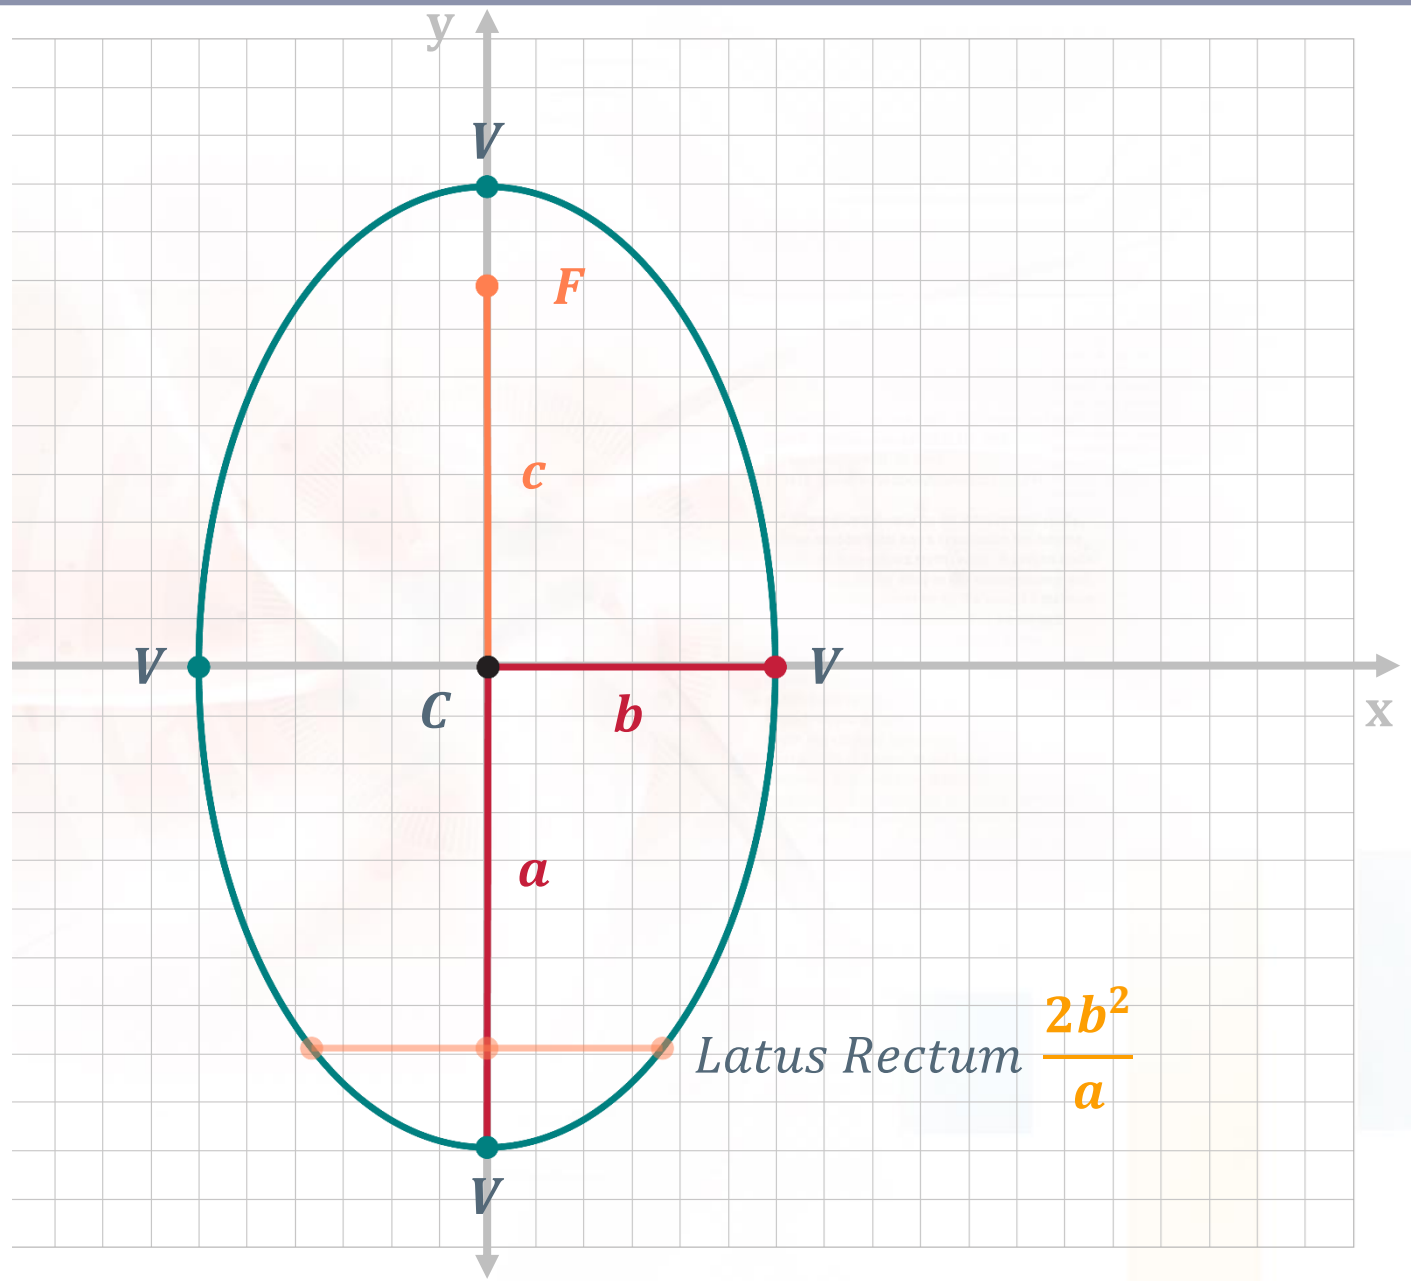
center, $C(0, 0)$

vertices, $V(\pm a, 0)$, $V(0, \pm b)$

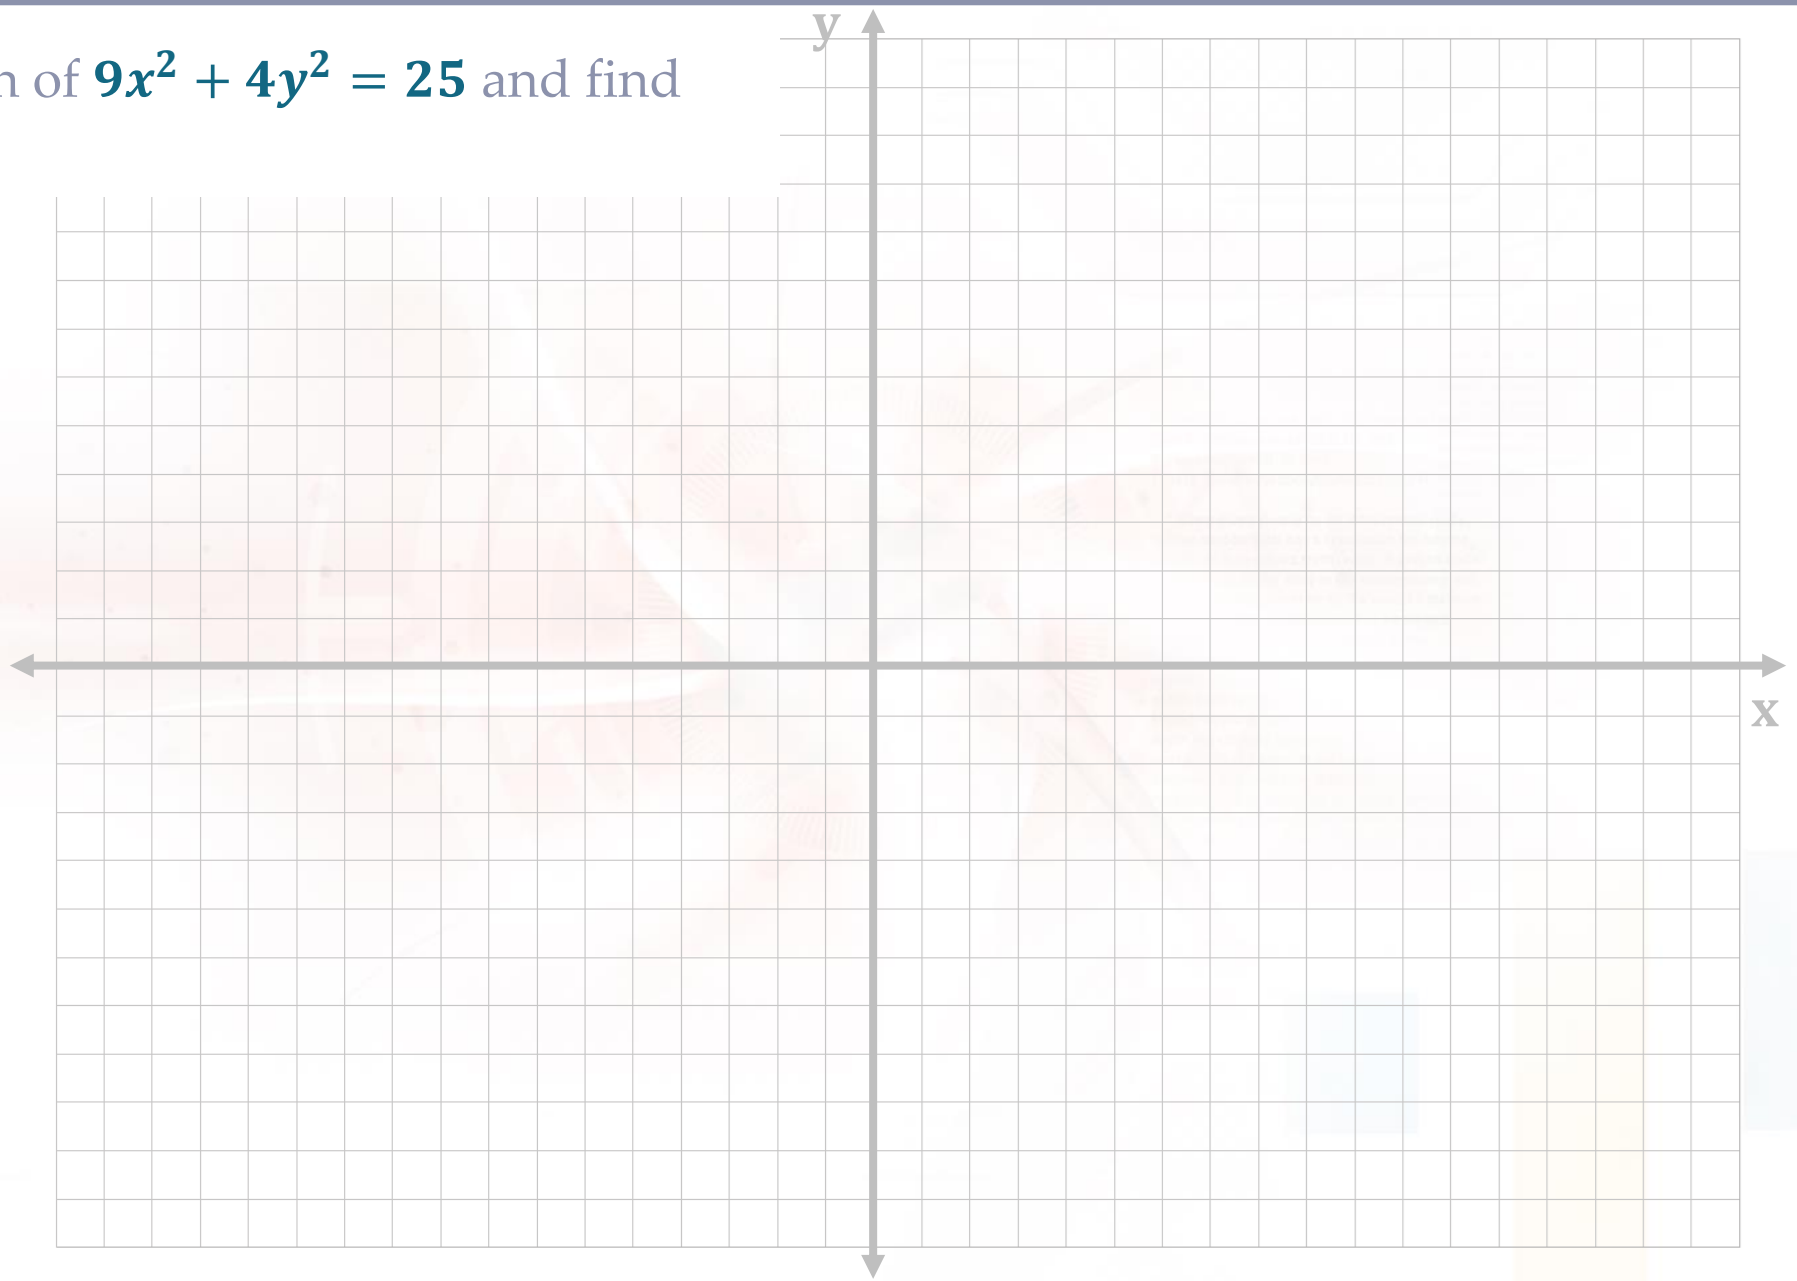
foci, $F(\pm c, 0)$

major axis, $2a$

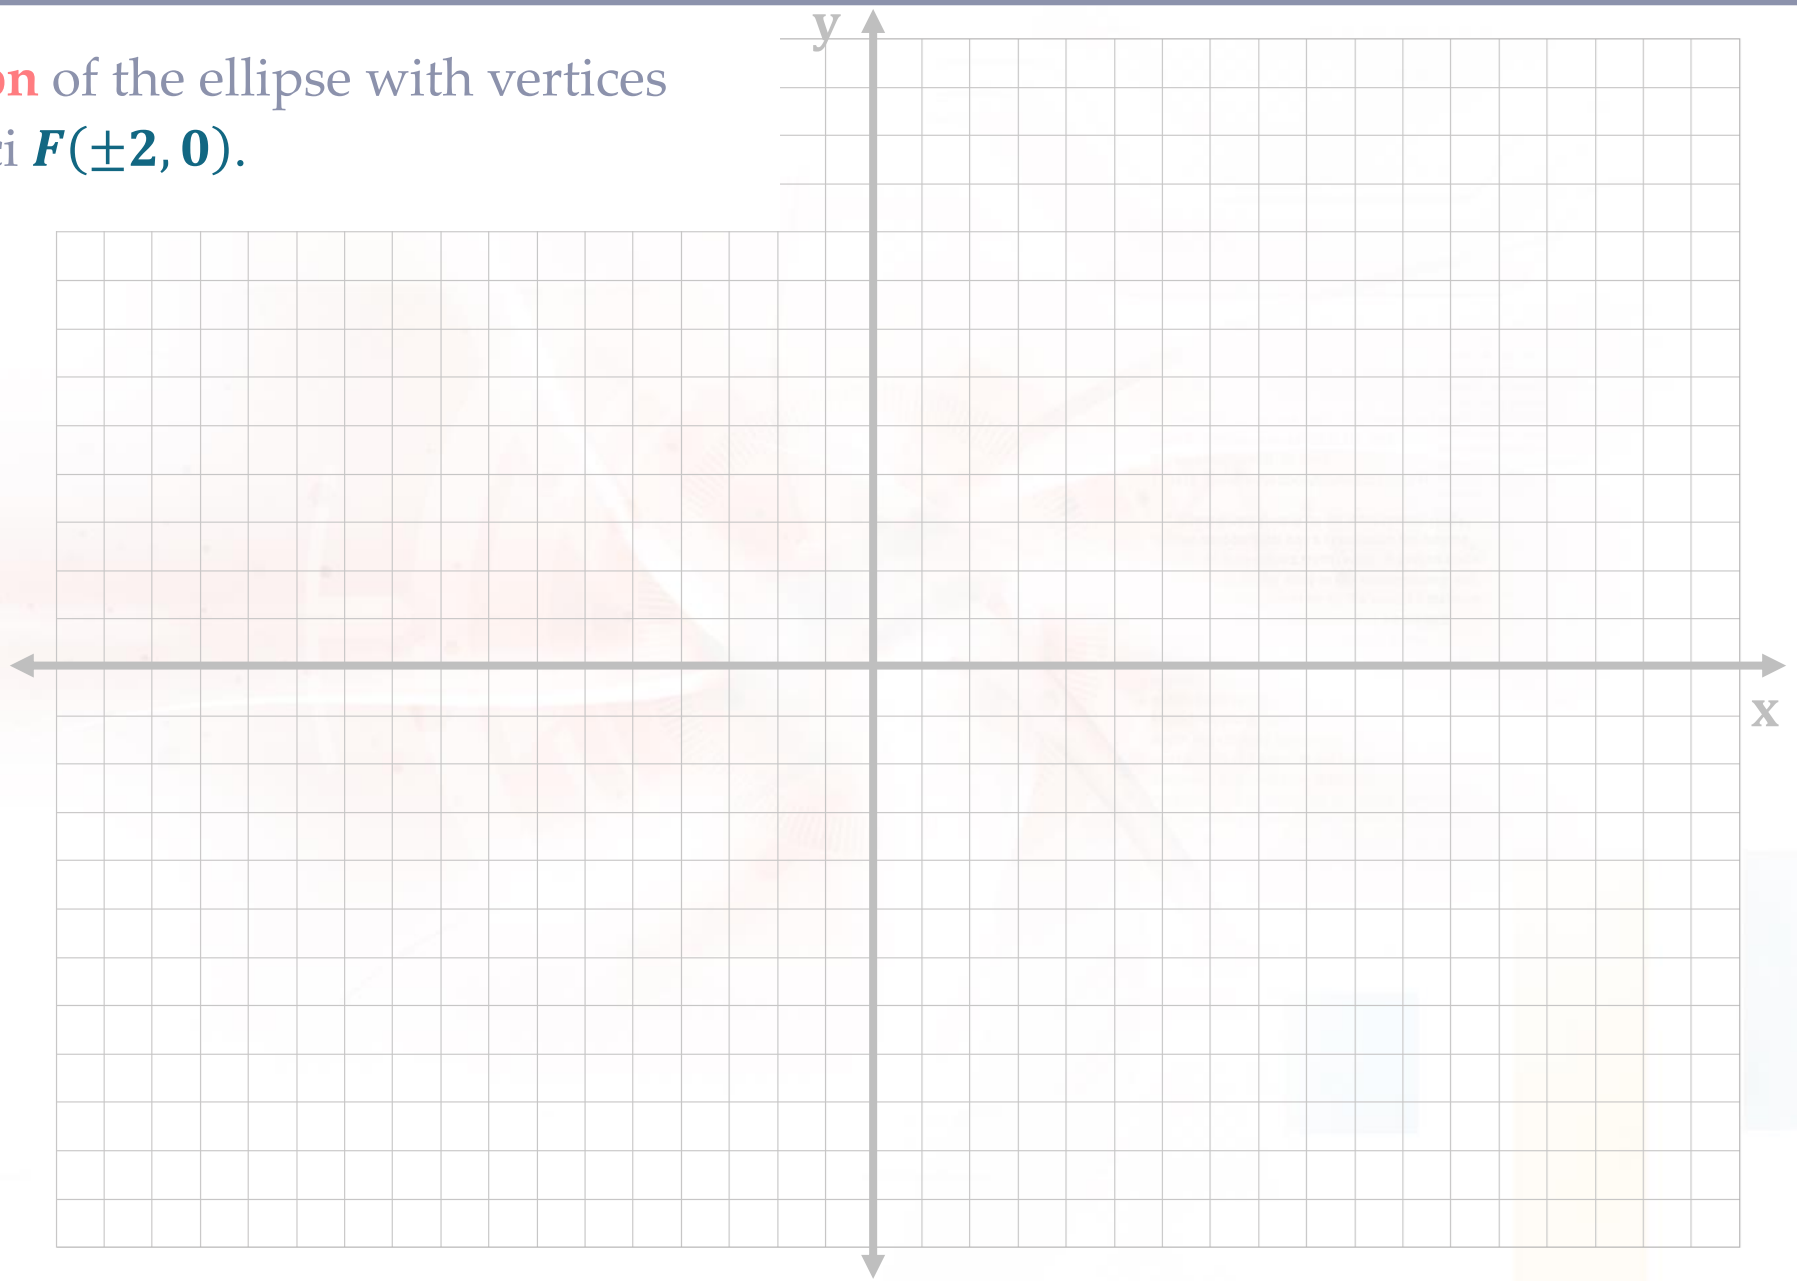
minor axis, $2b$



Sketch the graph of $9x^2 + 4y^2 = 25$ and find the **foci**.



Find the **equation** of the ellipse with vertices $\boldsymbol{V(\pm 4, 0)}$ and foci $\boldsymbol{F(\pm 2, 0)}$.

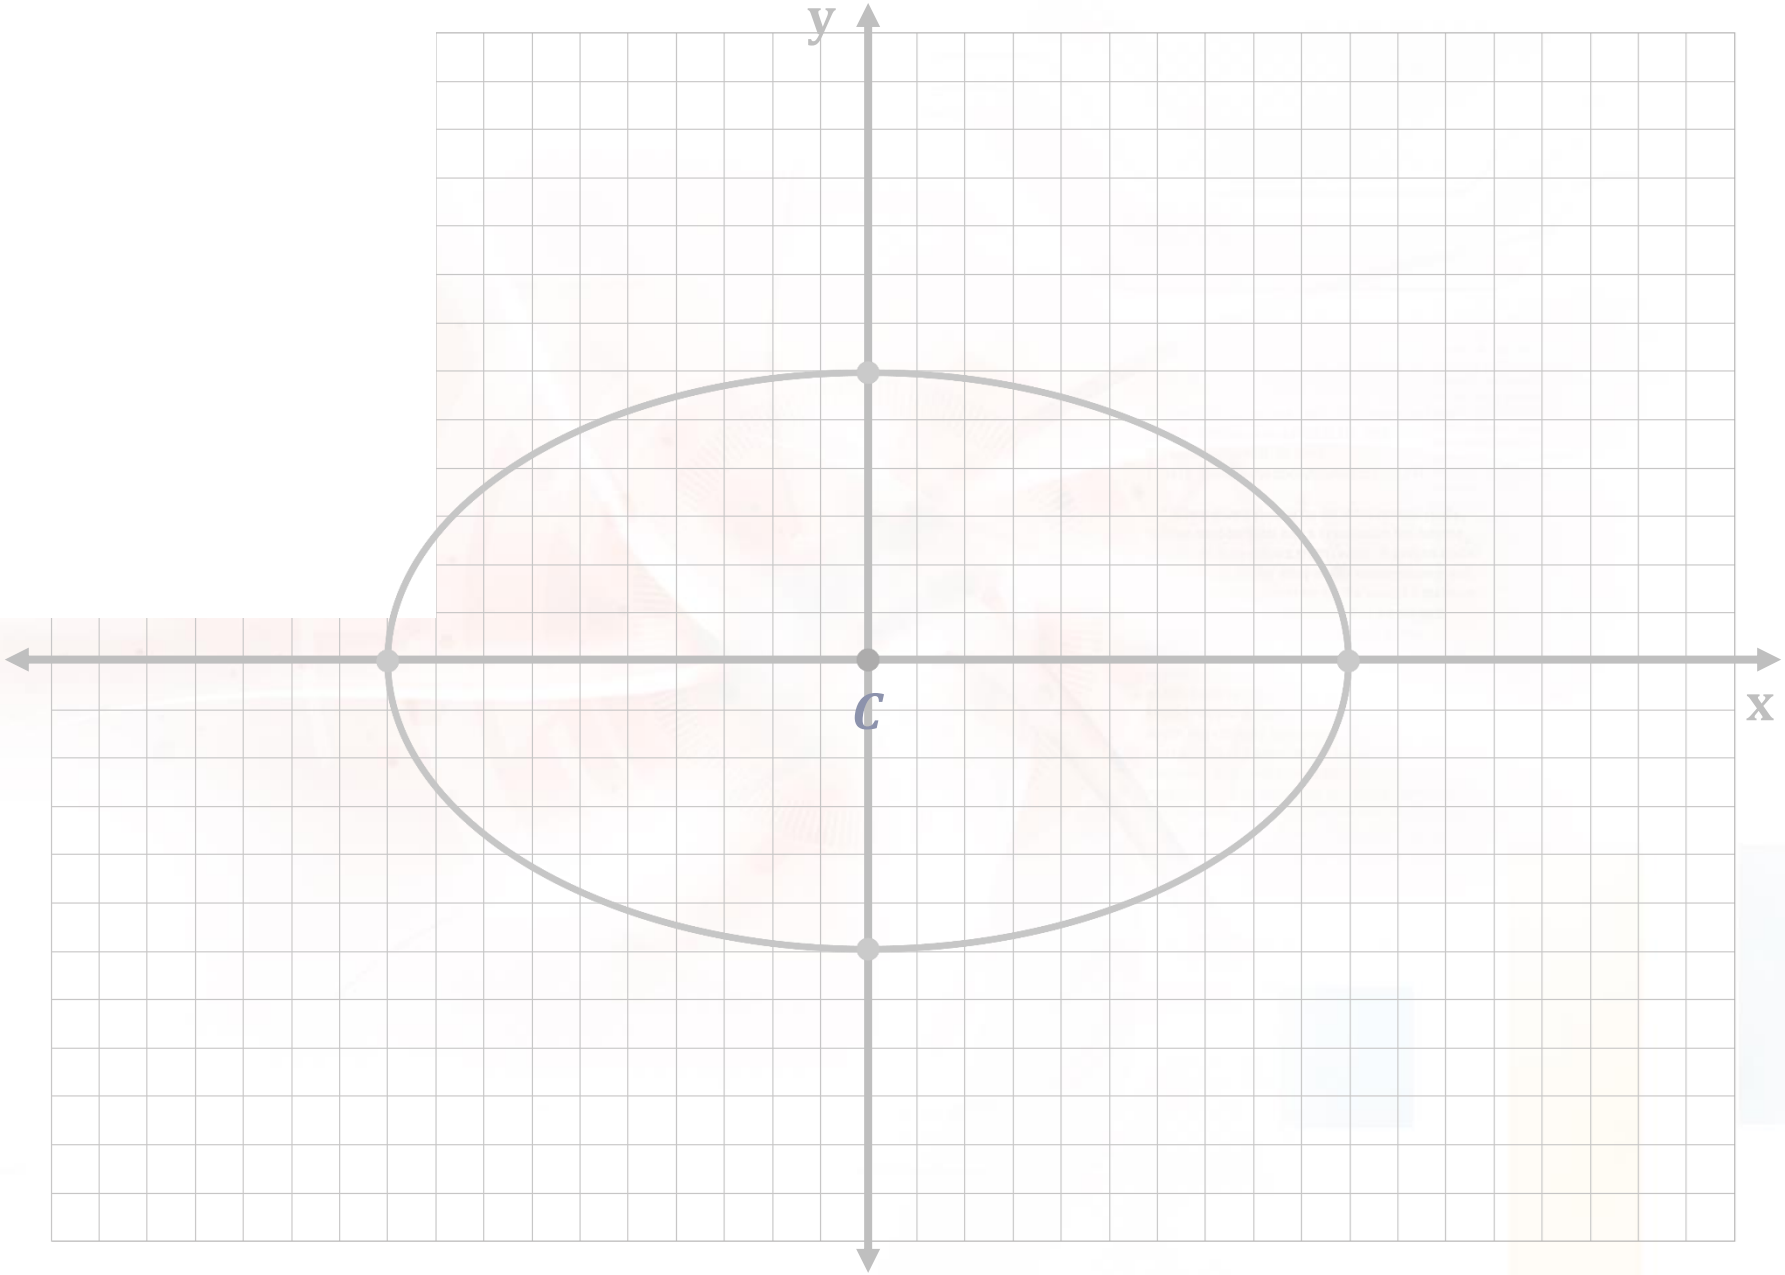


ELLIPSE WITH CENTER AT $C(h, k)$

CENTER AT THE ORIGIN

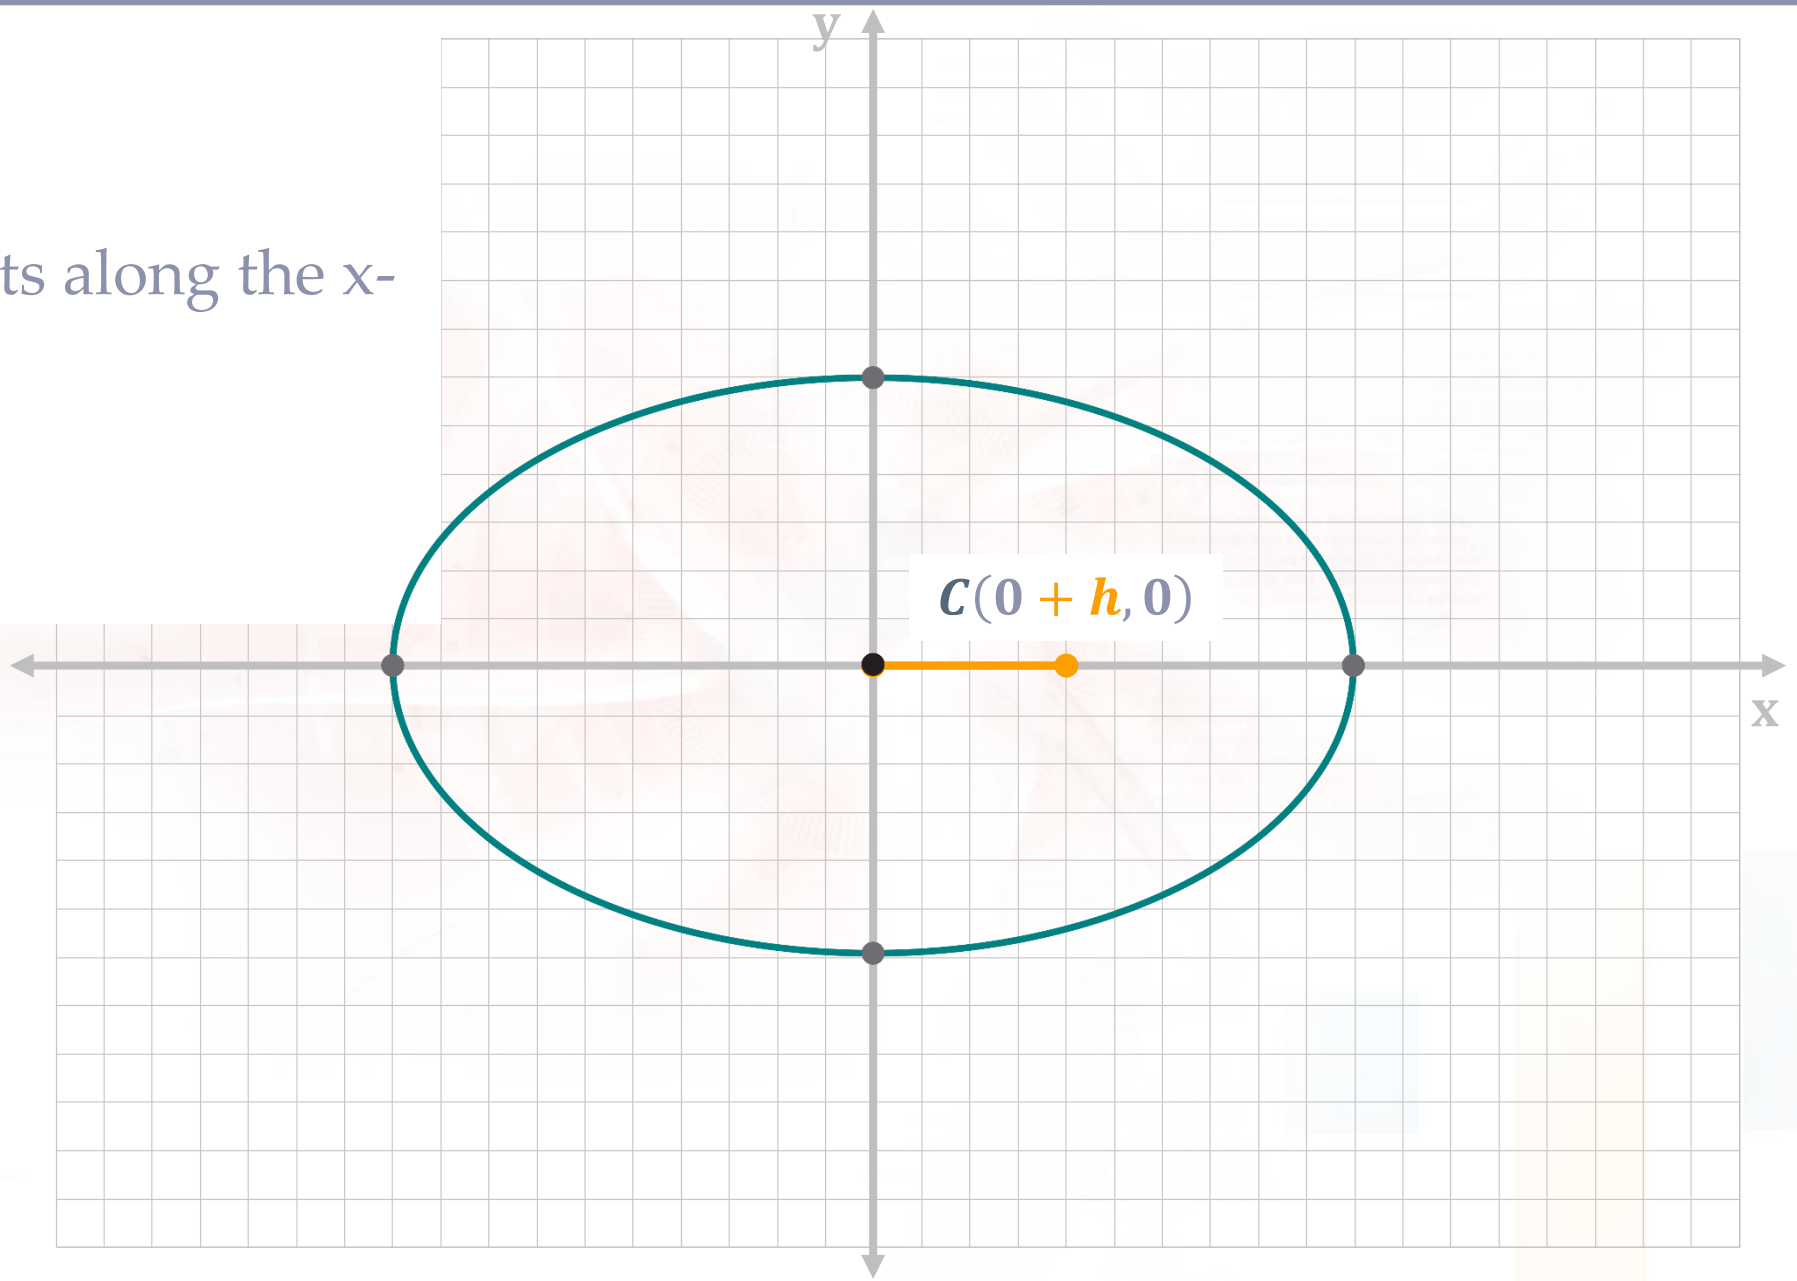
center,

$C(0, 0)$



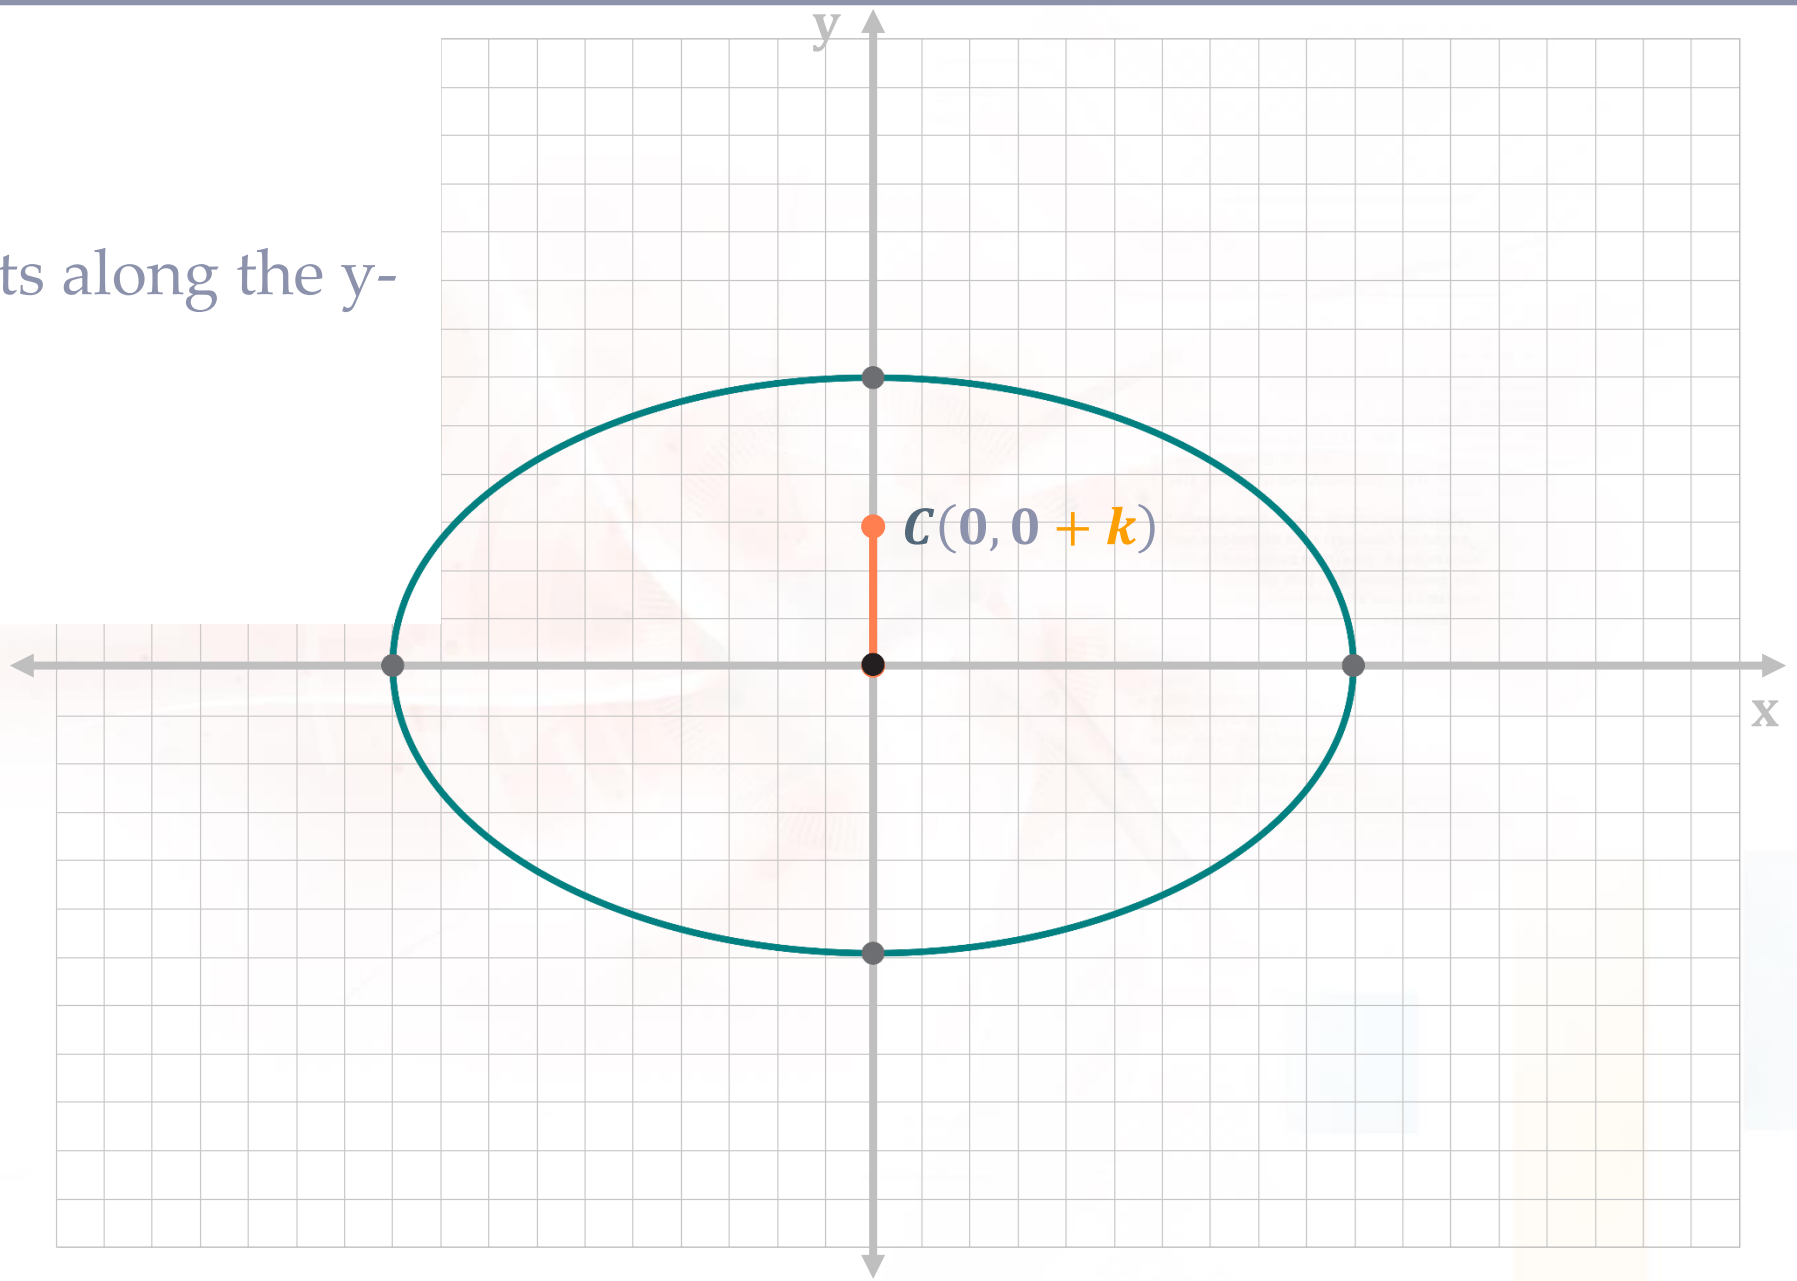
CENTER AT $C(h, 0)$

moving h units along the x-axis



CENTER AT $C(0, k)$

moving k units along the y-axis

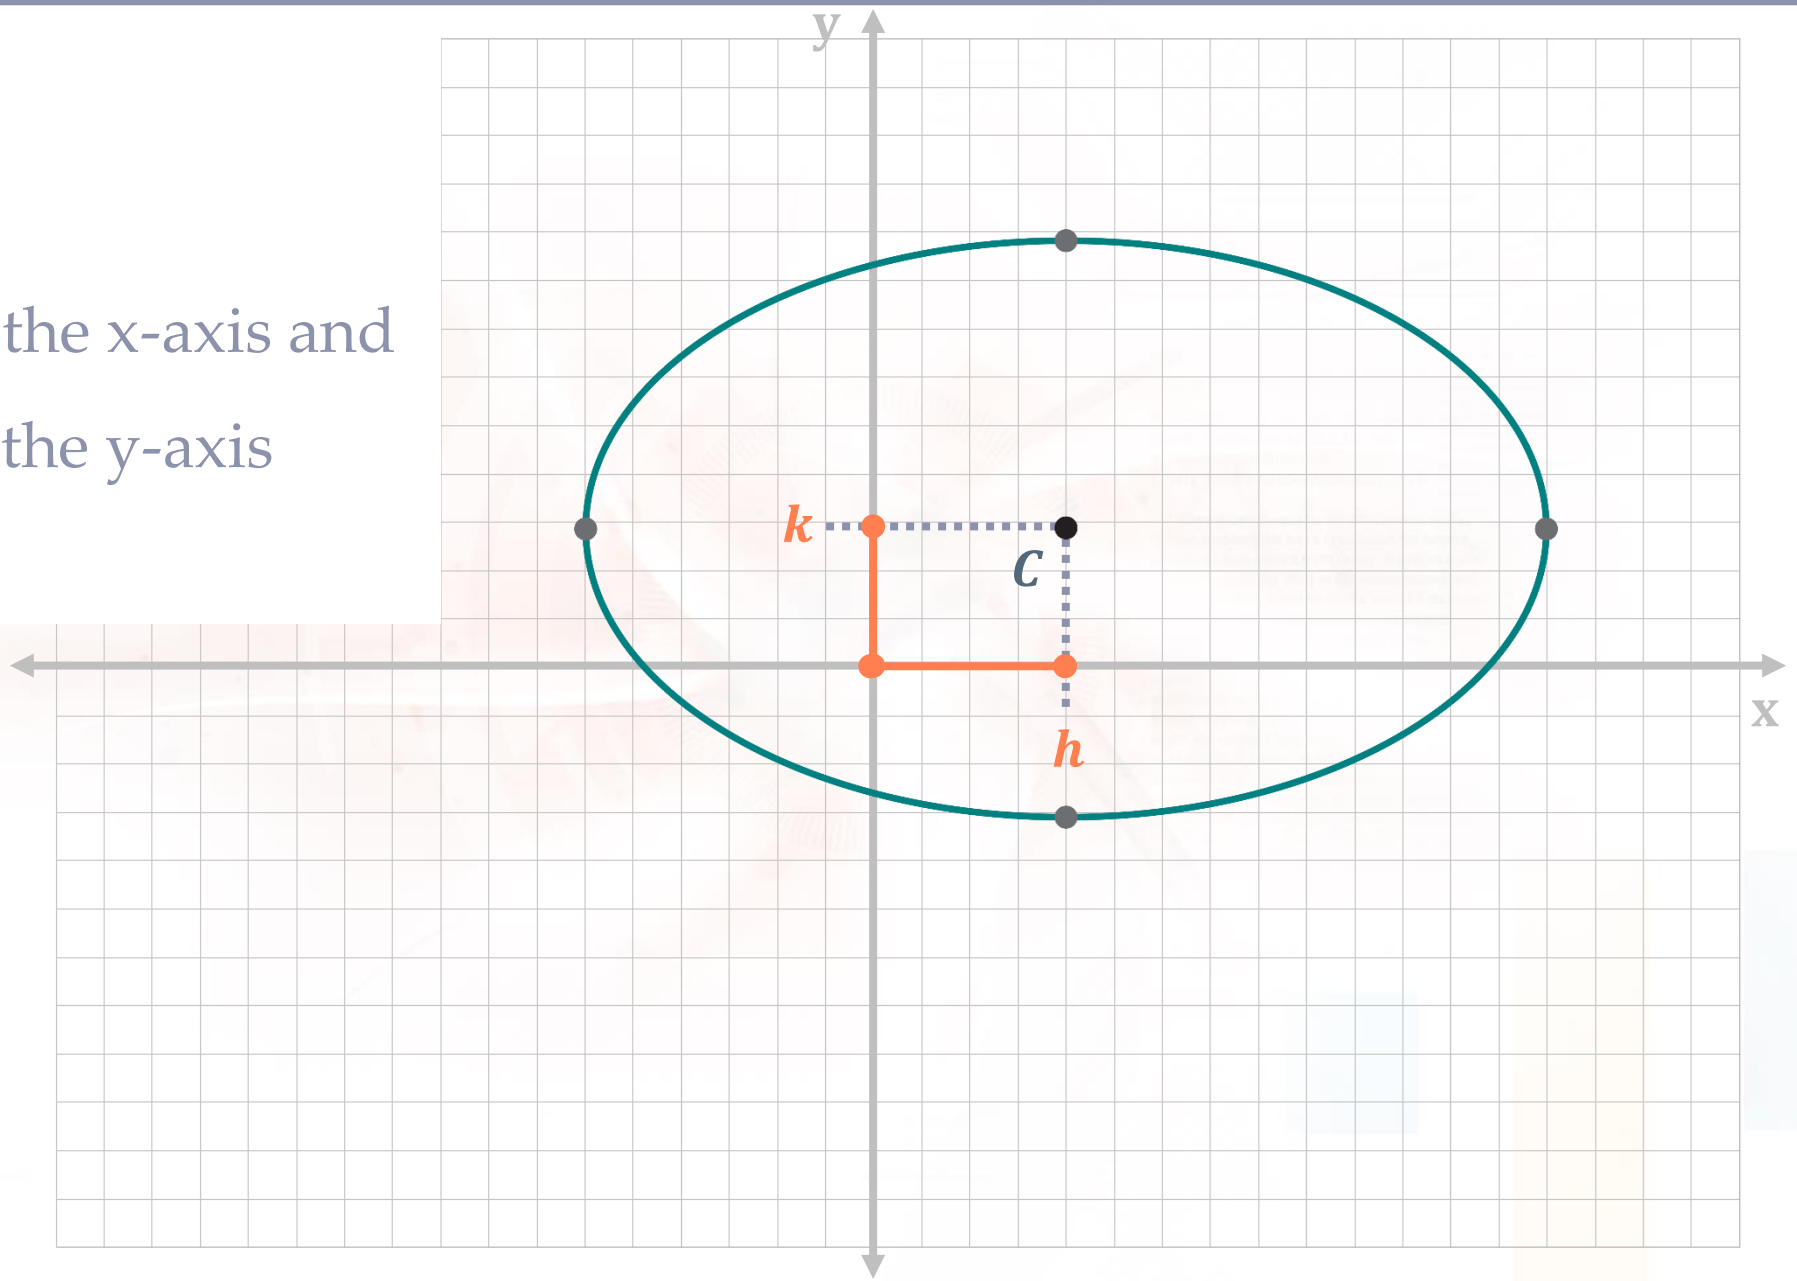


CENTER AT $C(h, k)$

moving

h units along the x-axis and

k units along the y-axis



VERTICES

vertices,

$V(h \pm a, k)$

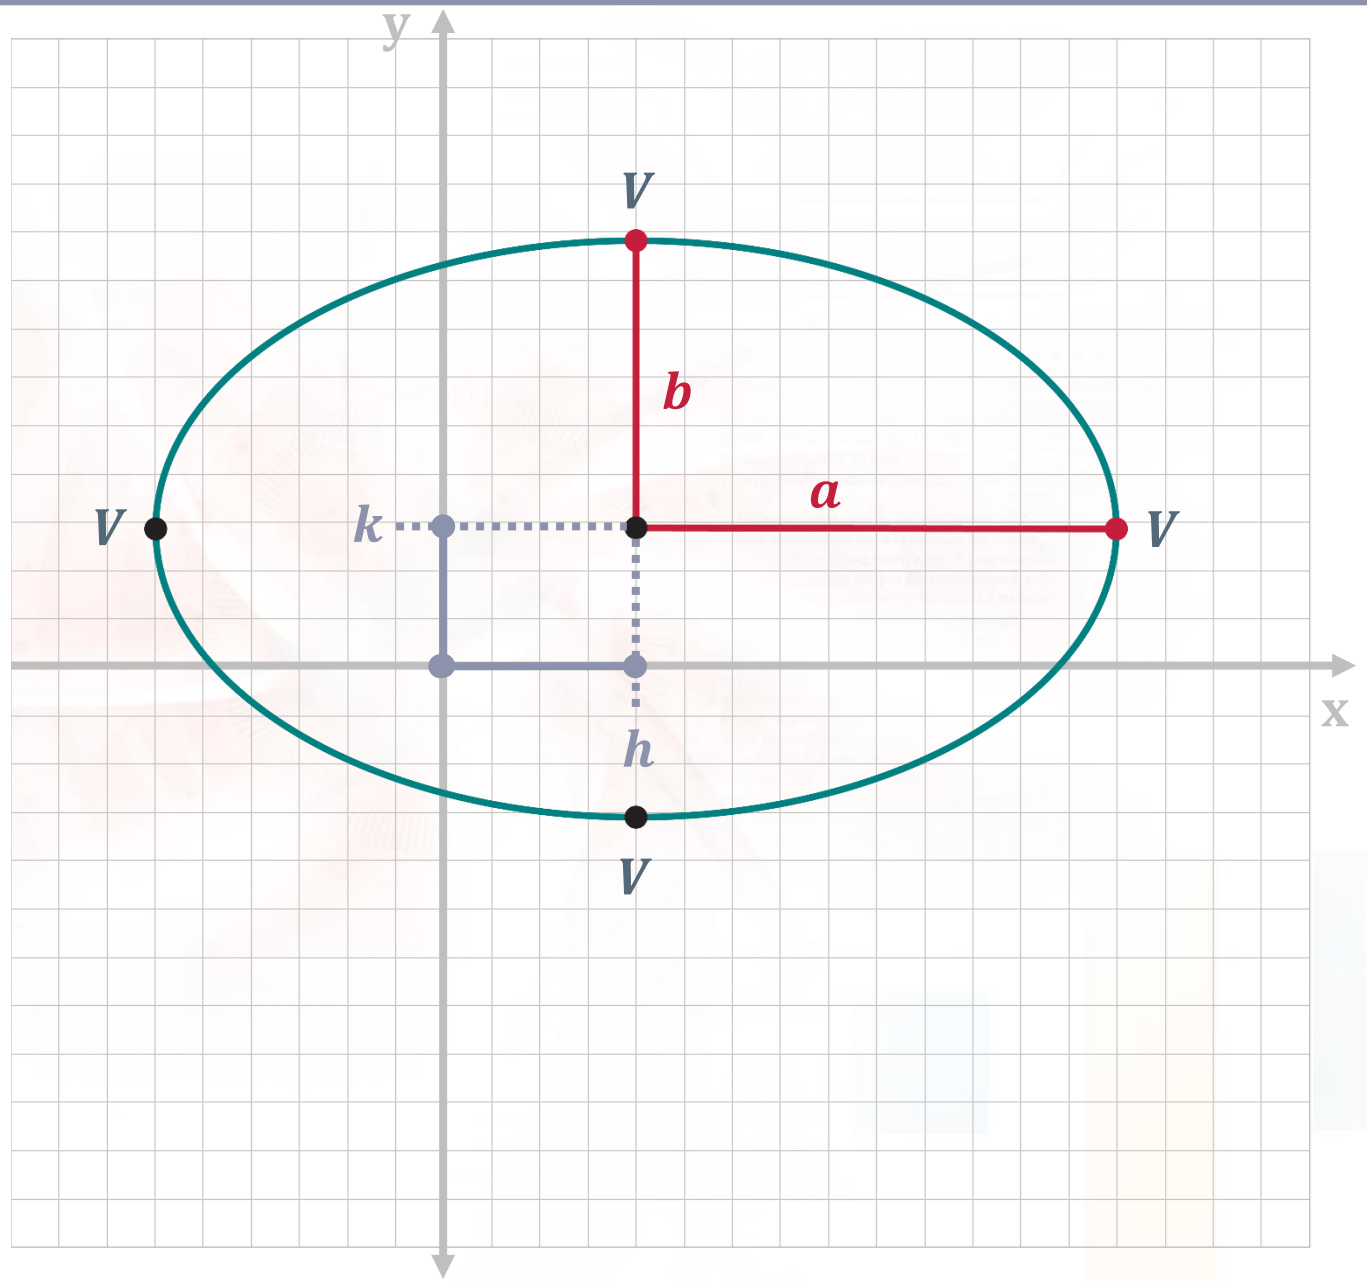
$V(h, k \pm b)$

major axis,

$2a$

minor axis,

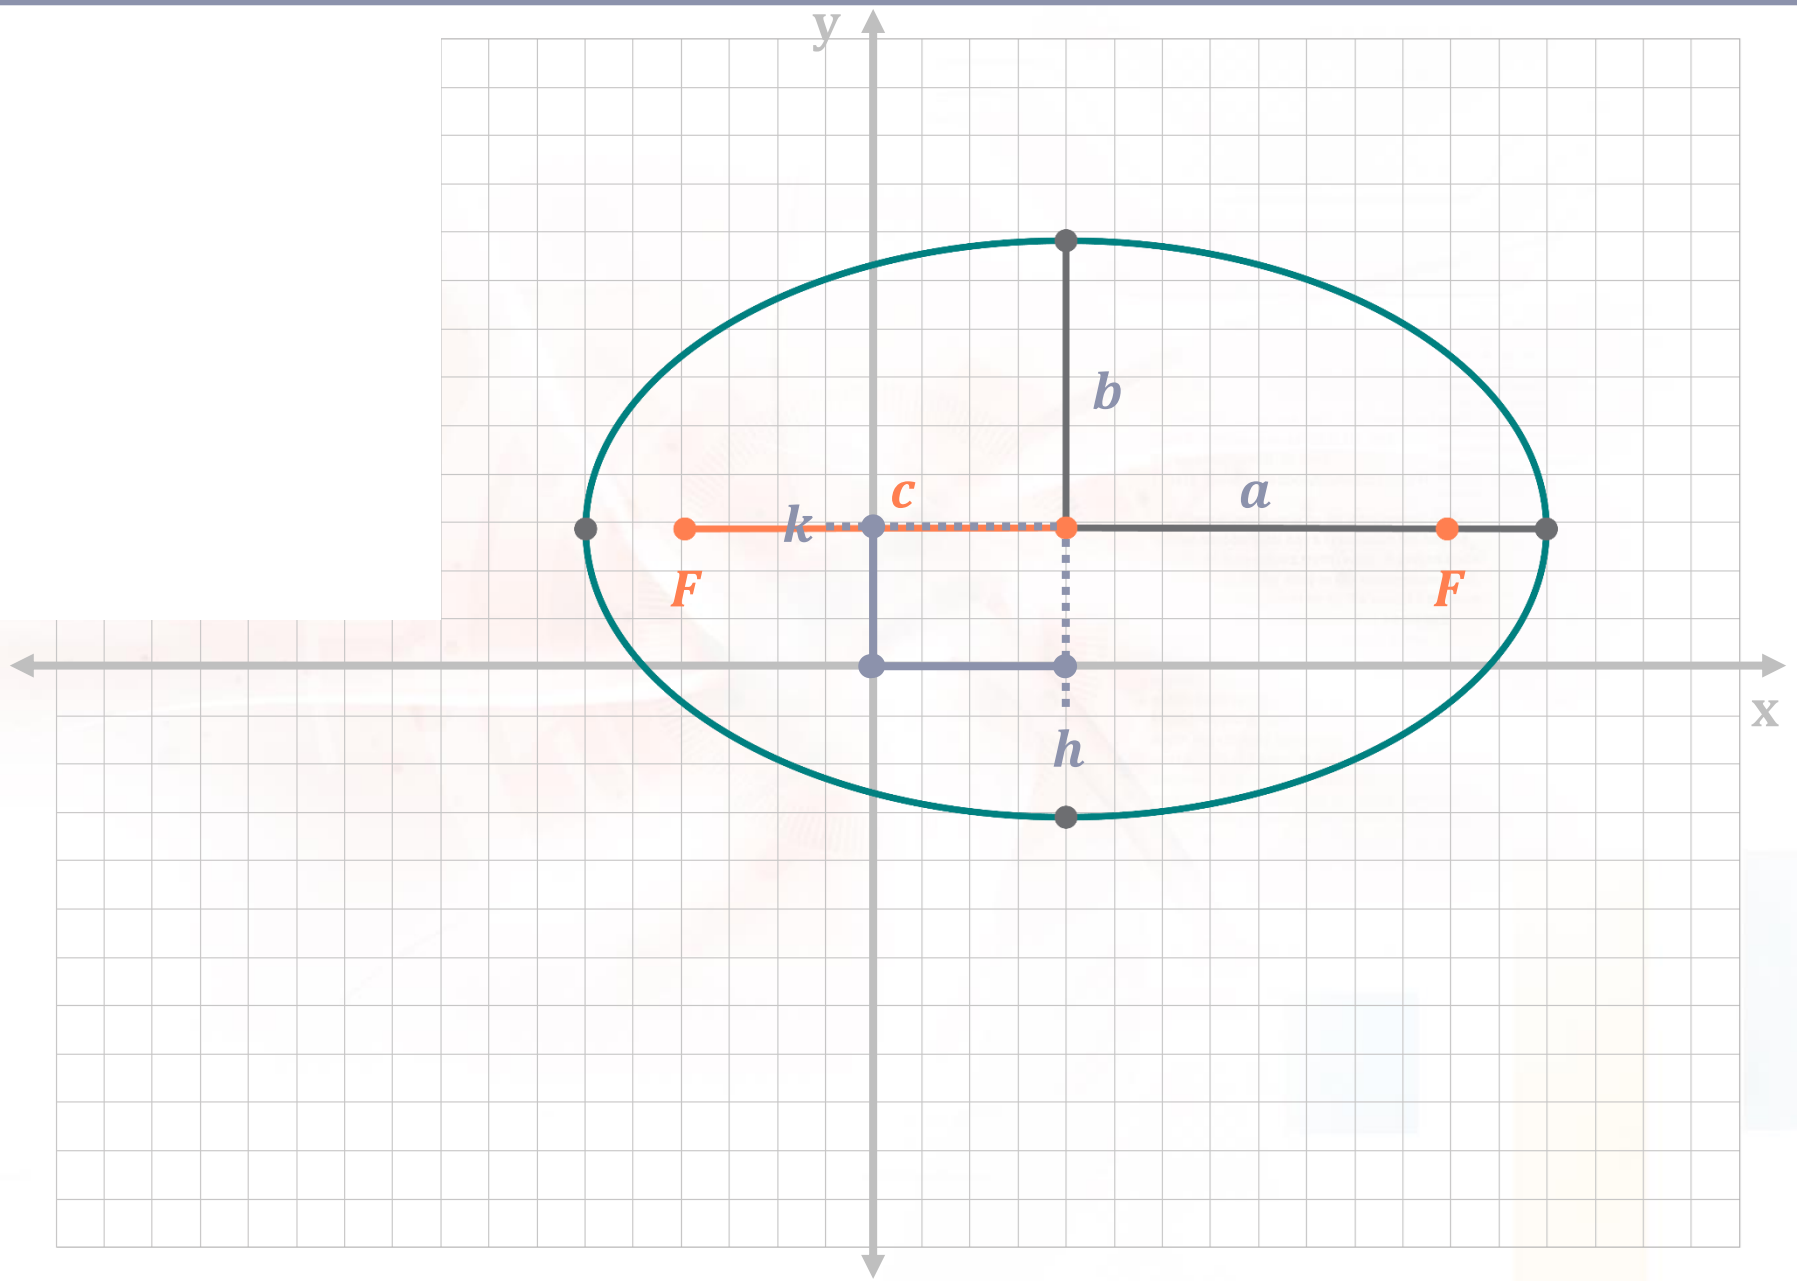
$2b$



foci,

$F(h \pm c, k)$

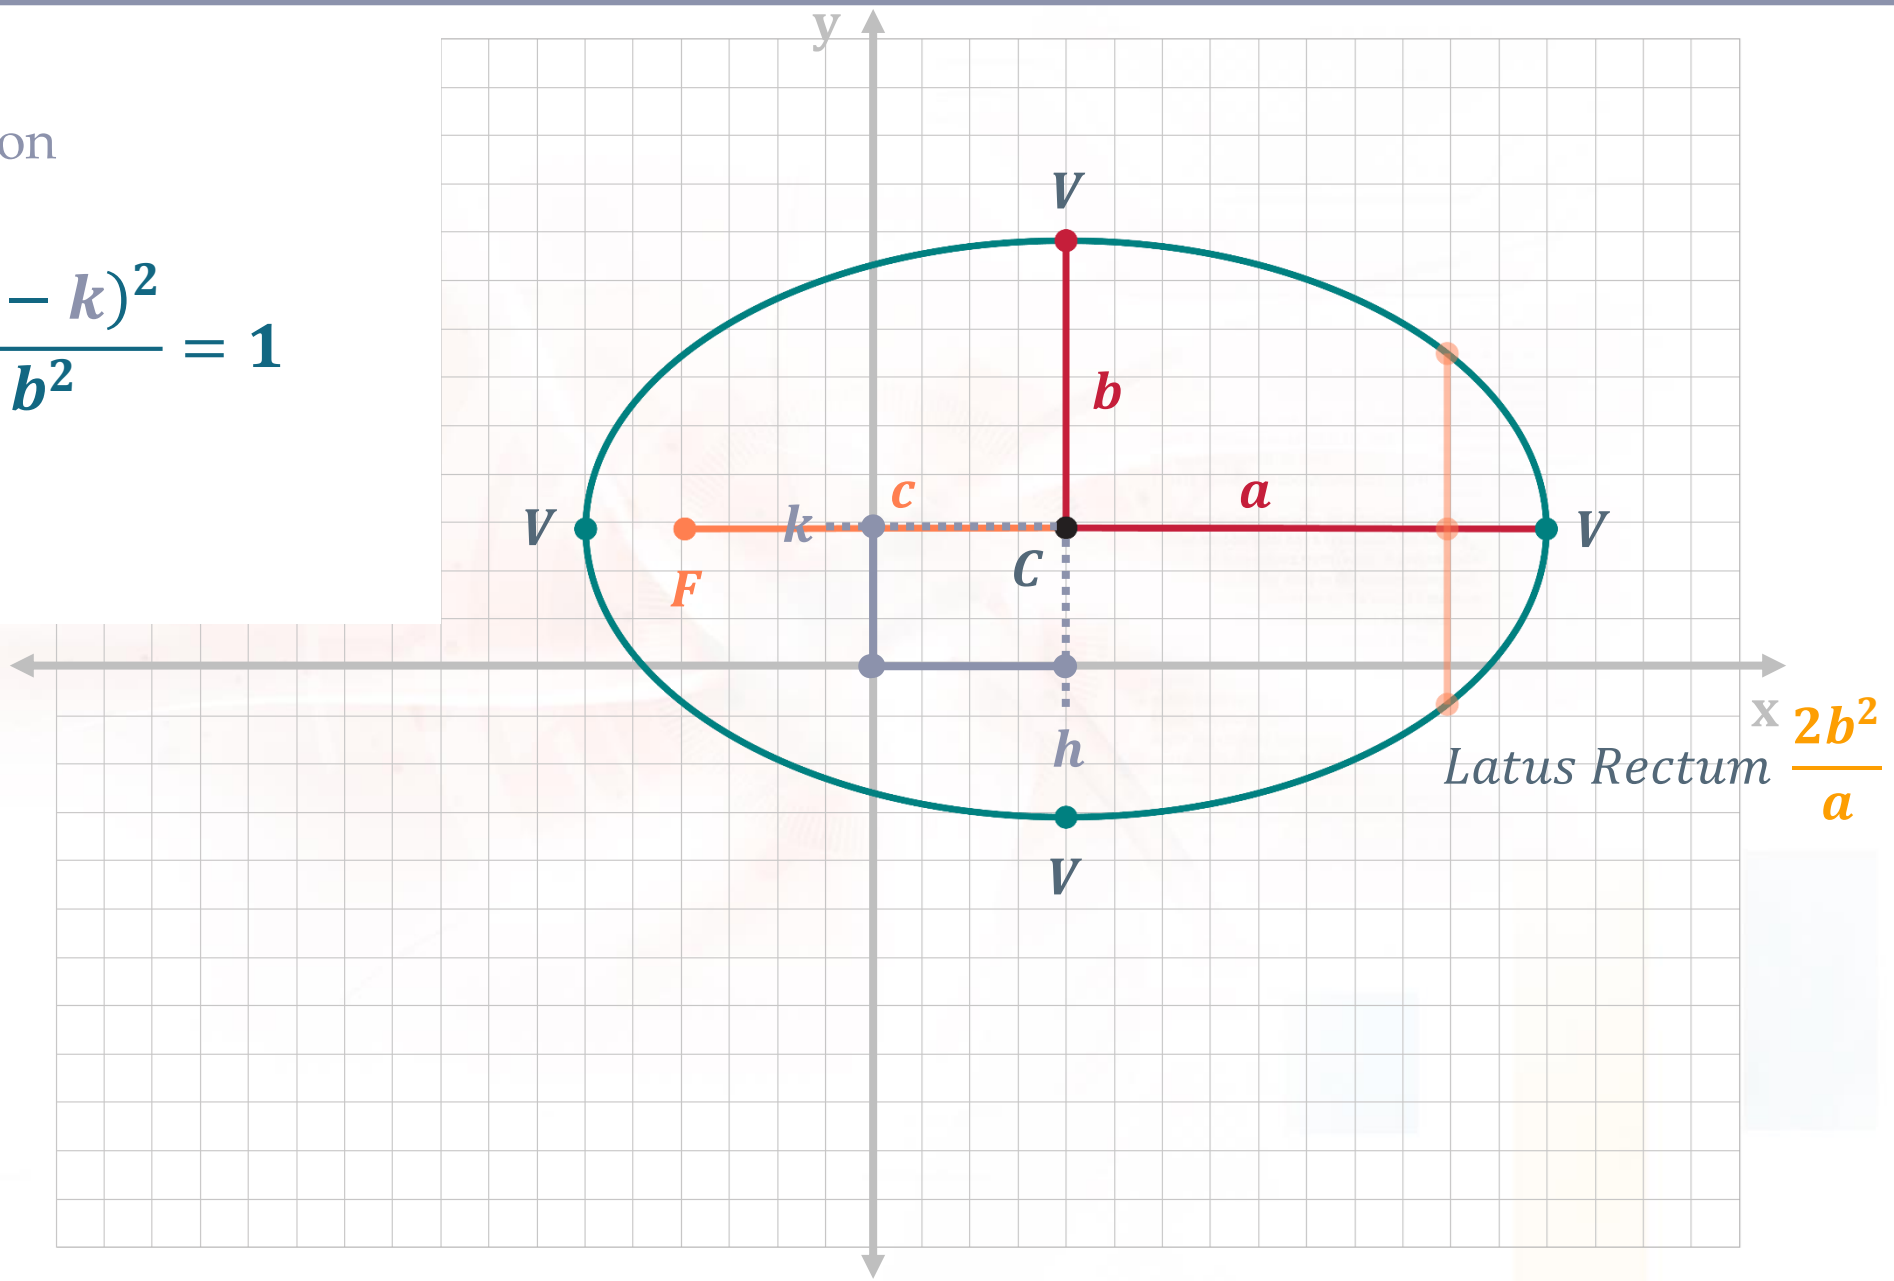
$c^2 = a^2 - b^2$



Standard Equation

$$\frac{(x-h)^2}{a^2}+\frac{(y-k)^2}{b^2}=1$$

$$c^2=a^2-b^2$$



MAJOR AXIS is along the $x - axis$

Standard Equation

$$\frac{(x-h)^2}{a^2} + \frac{(y-k)^2}{b^2} = 1$$

$$c^2 = a^2 - b^2$$

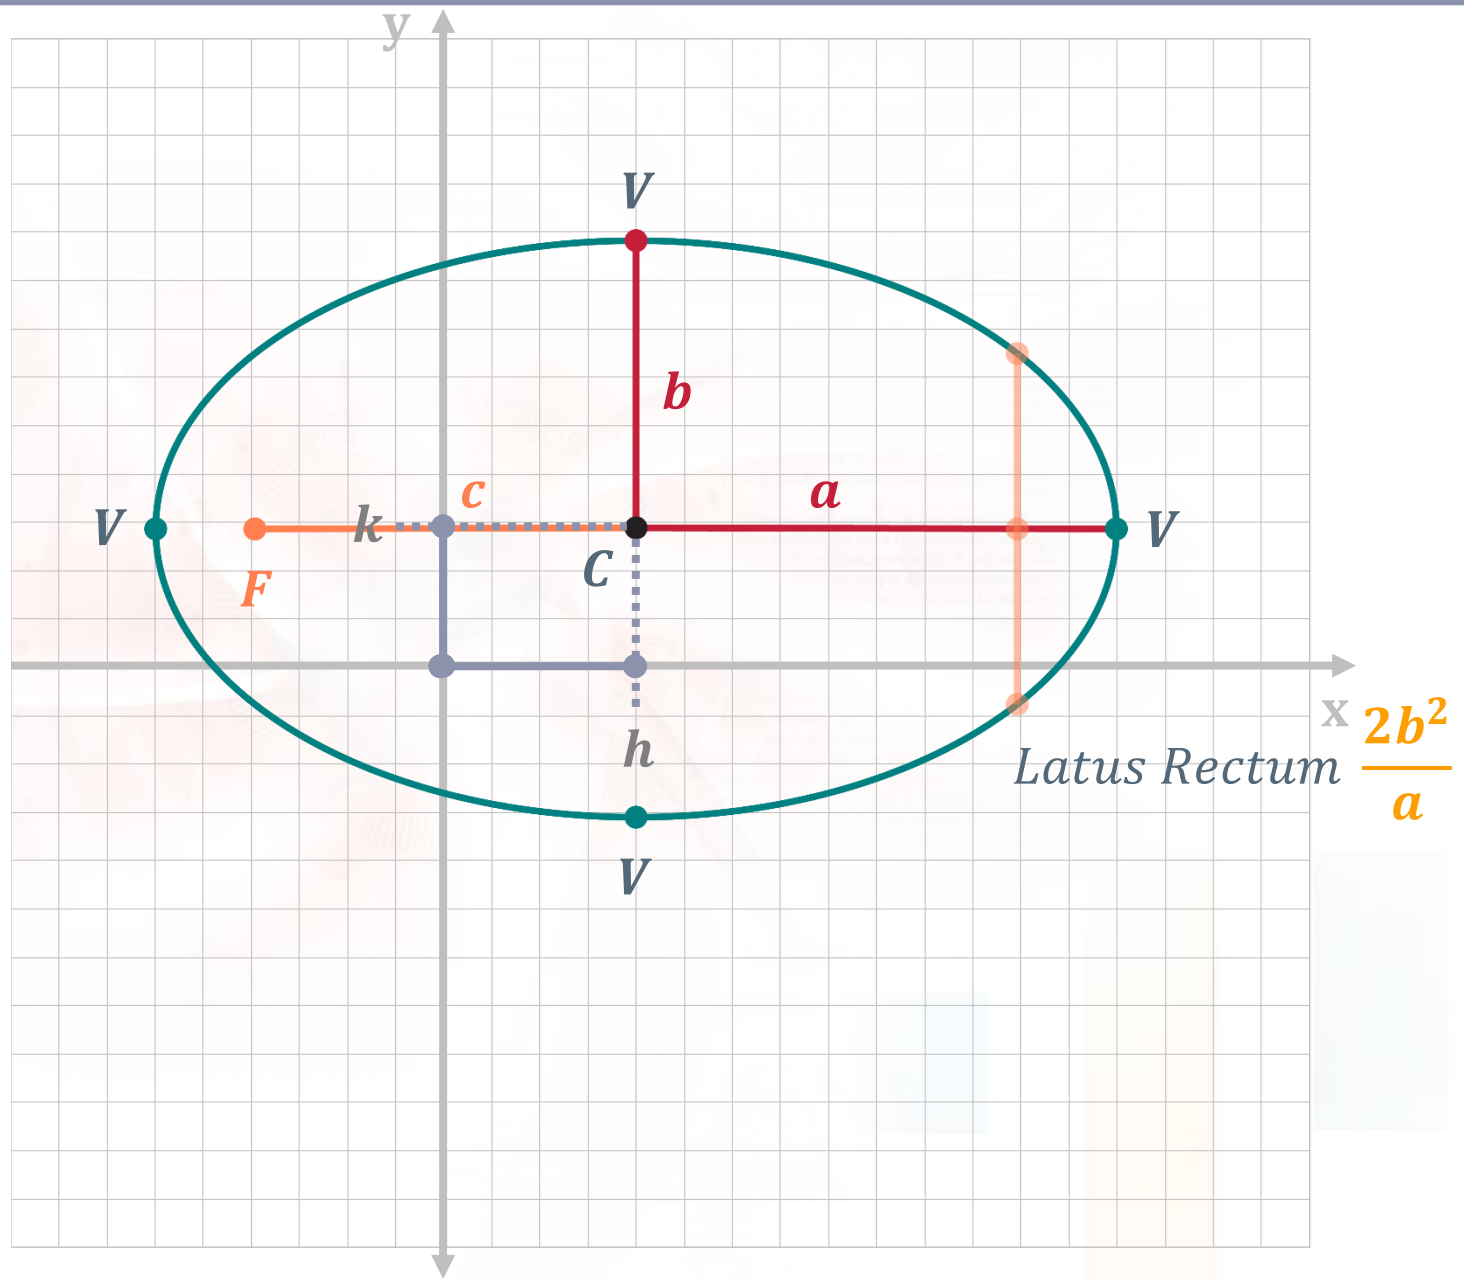
center, $C(h, k)$

vertices, $V(h \pm a, k)$, $V(h, k \pm b)$

foci, $F(h \pm c, k)$

major axis, $2a$

minor axis, $2b$



MAJOR AXIS is along the $y - axis$

Standard Equation

$$\frac{(x-h)^2}{b^2} + \frac{(y-k)^2}{a^2} = 1$$

$$c^2 = a^2 - b^2$$

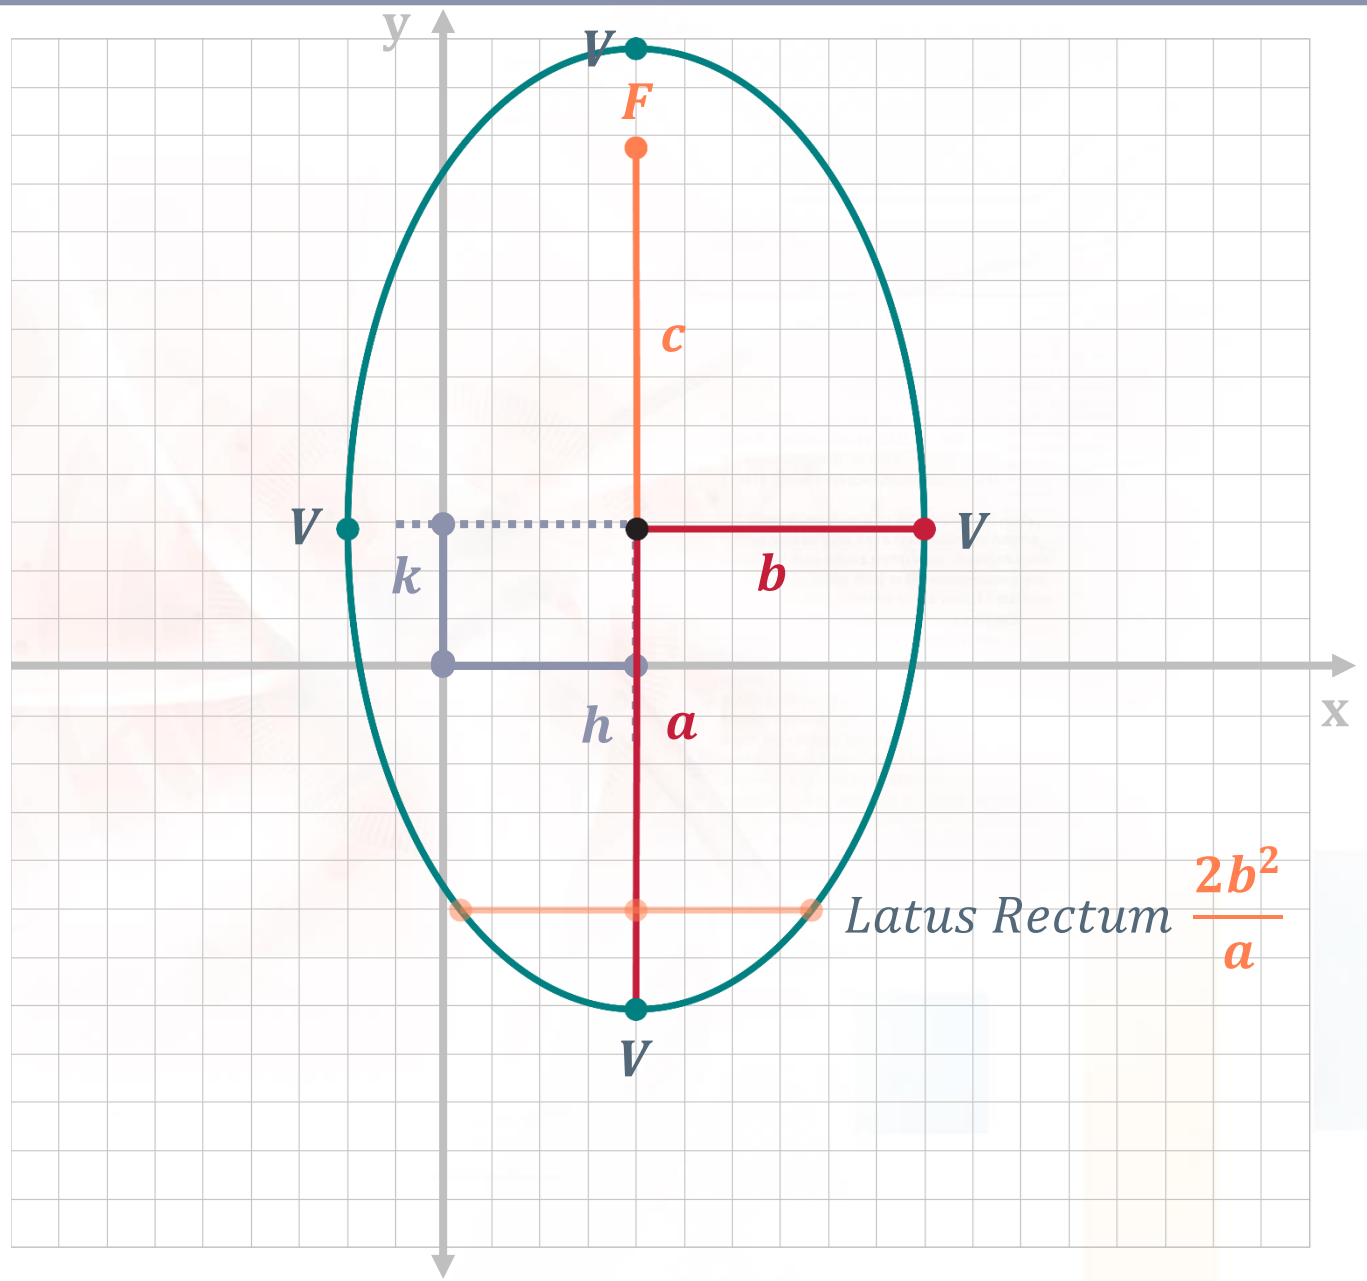
center, $C(h, k)$

vertices, $V(h, k \pm a)$, $V(h \pm b, k)$

foci, $F(h, k \pm c)$

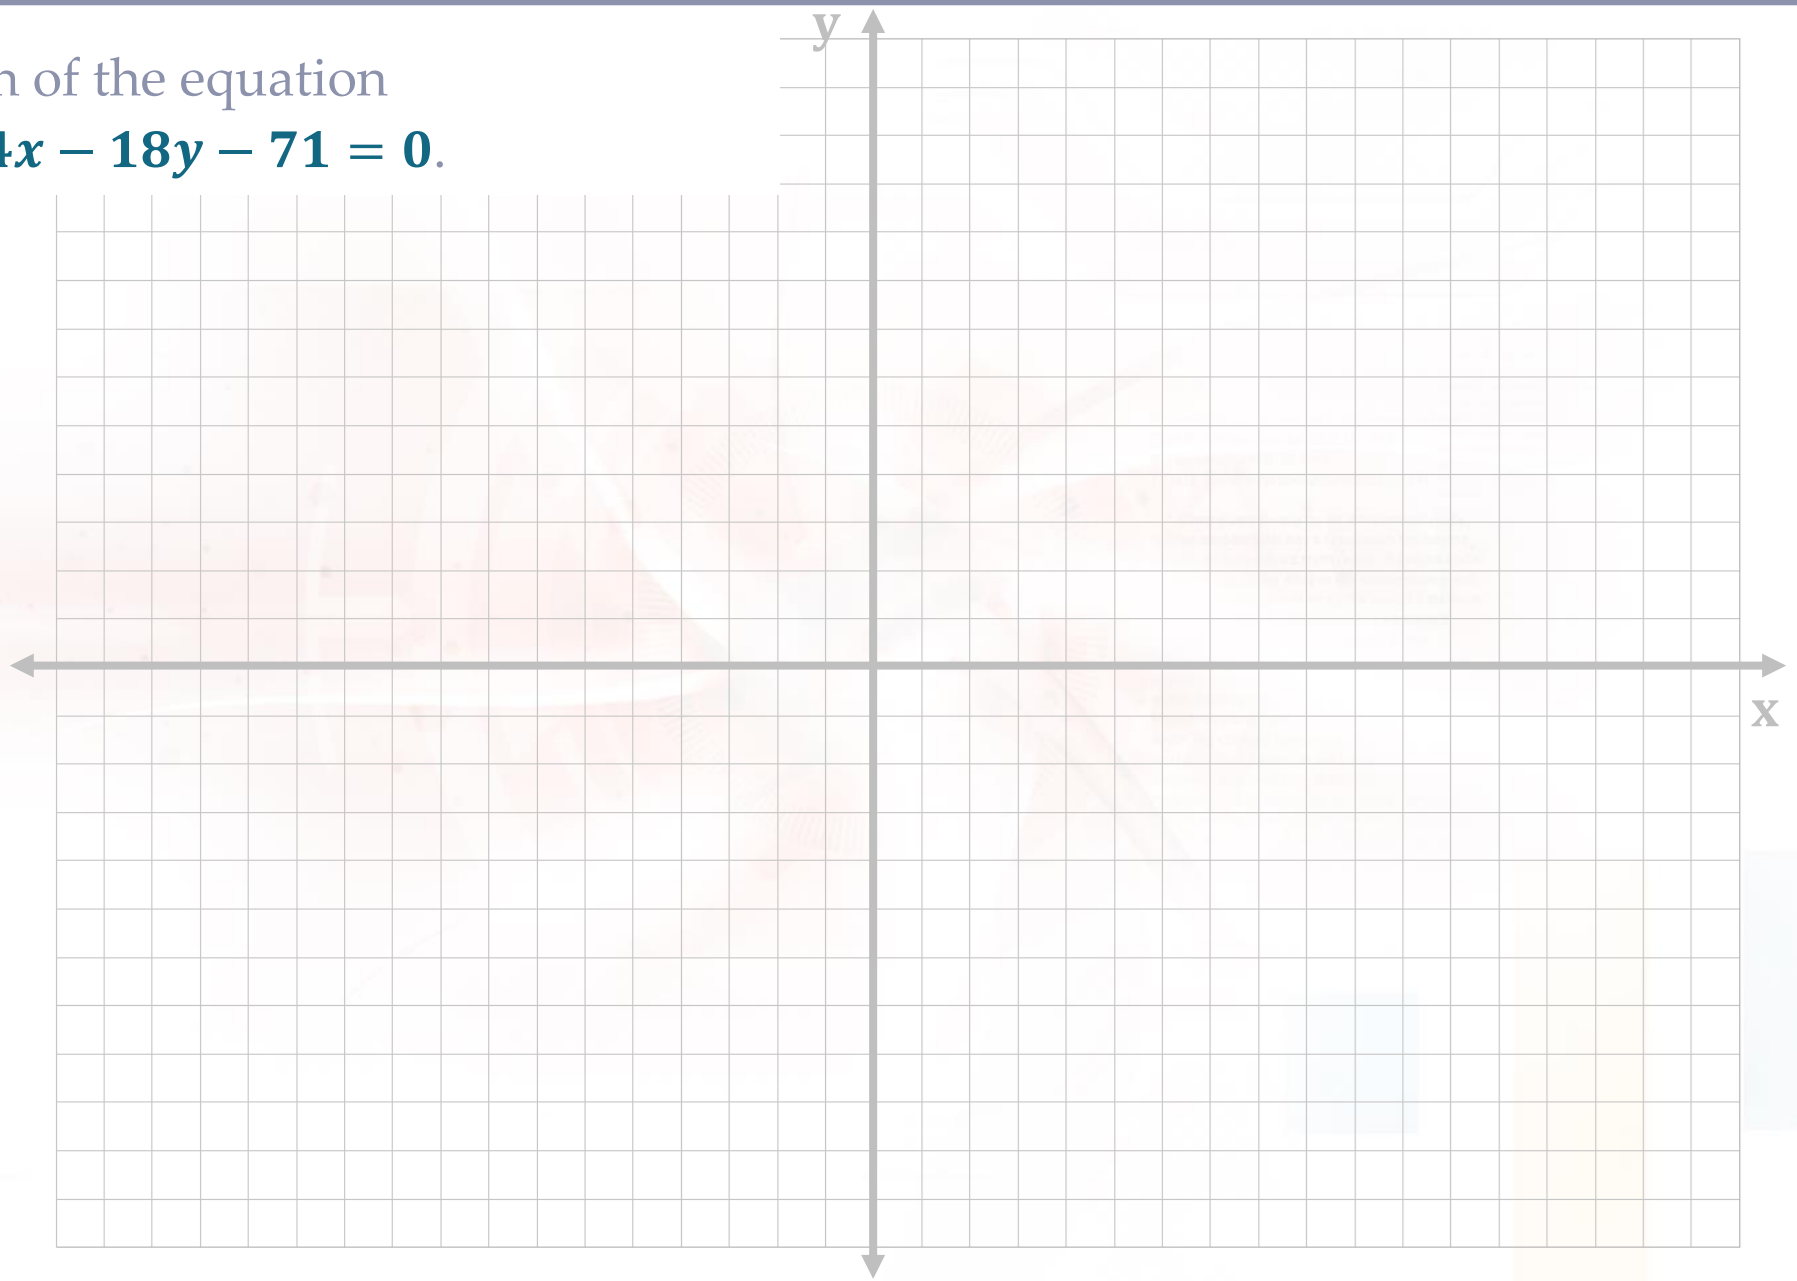
major axis, $2a$

minor axis, $2b$



Sketch the graph of the equation

$$16x^2 + 9y^2 + 64x - 18y - 71 = 0.$$



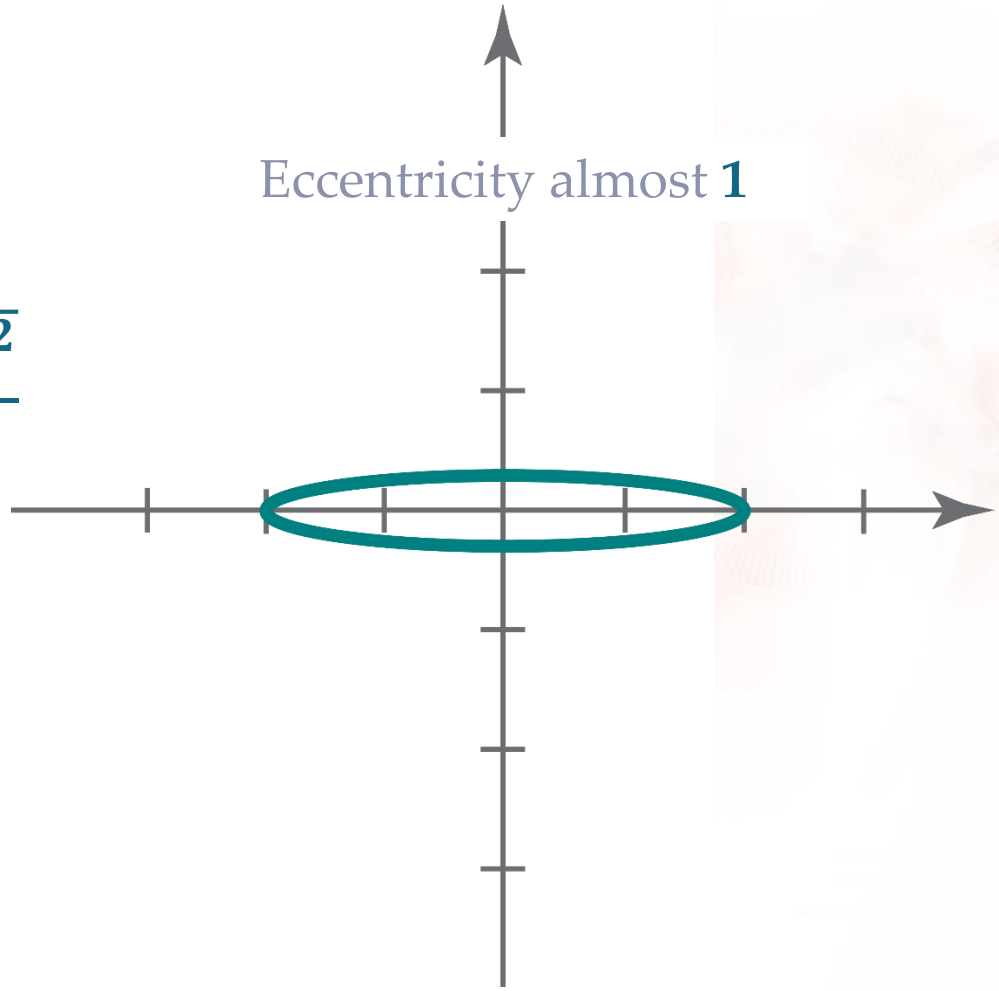
THE ECCENTRICITY OF AN ELLIPSE

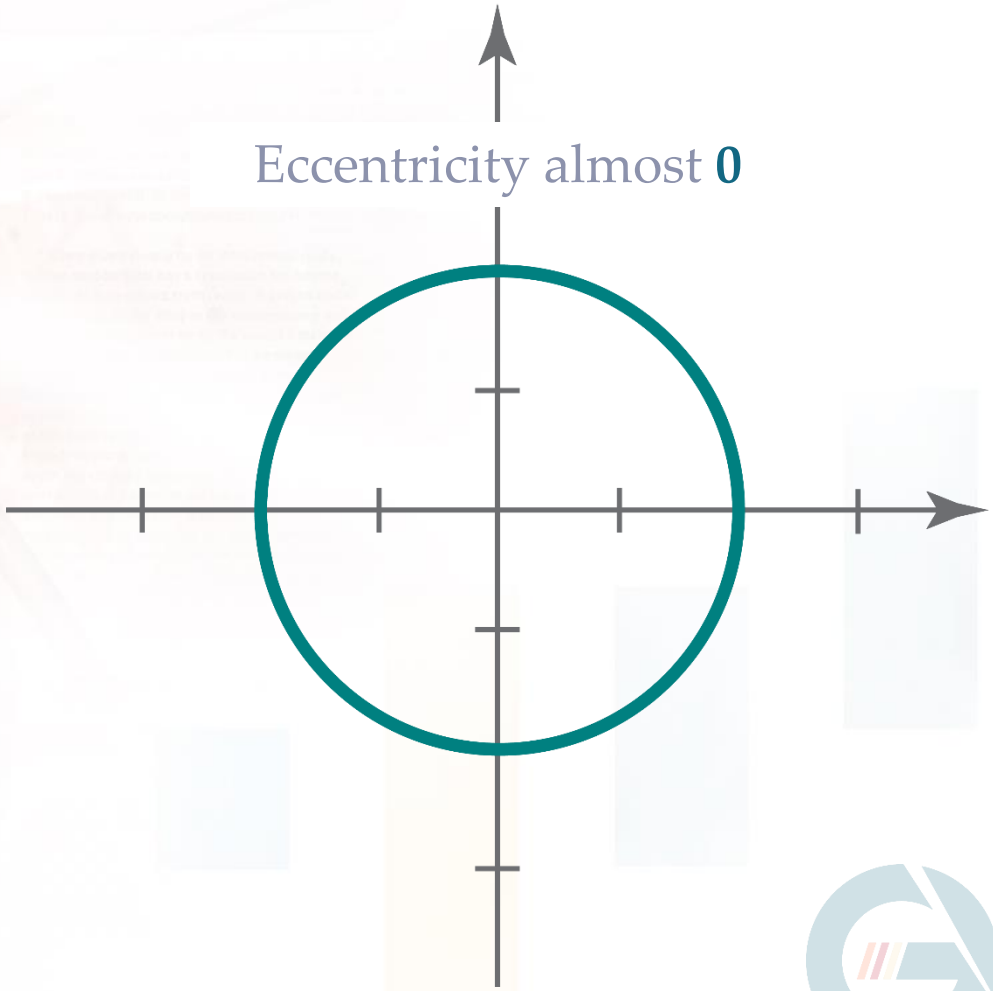
ECCENTRICITY, e

$$e = \frac{distance\ from\ the\ center\ to\ focus}{distance\ from\ the\ center\ to\ vertex}$$

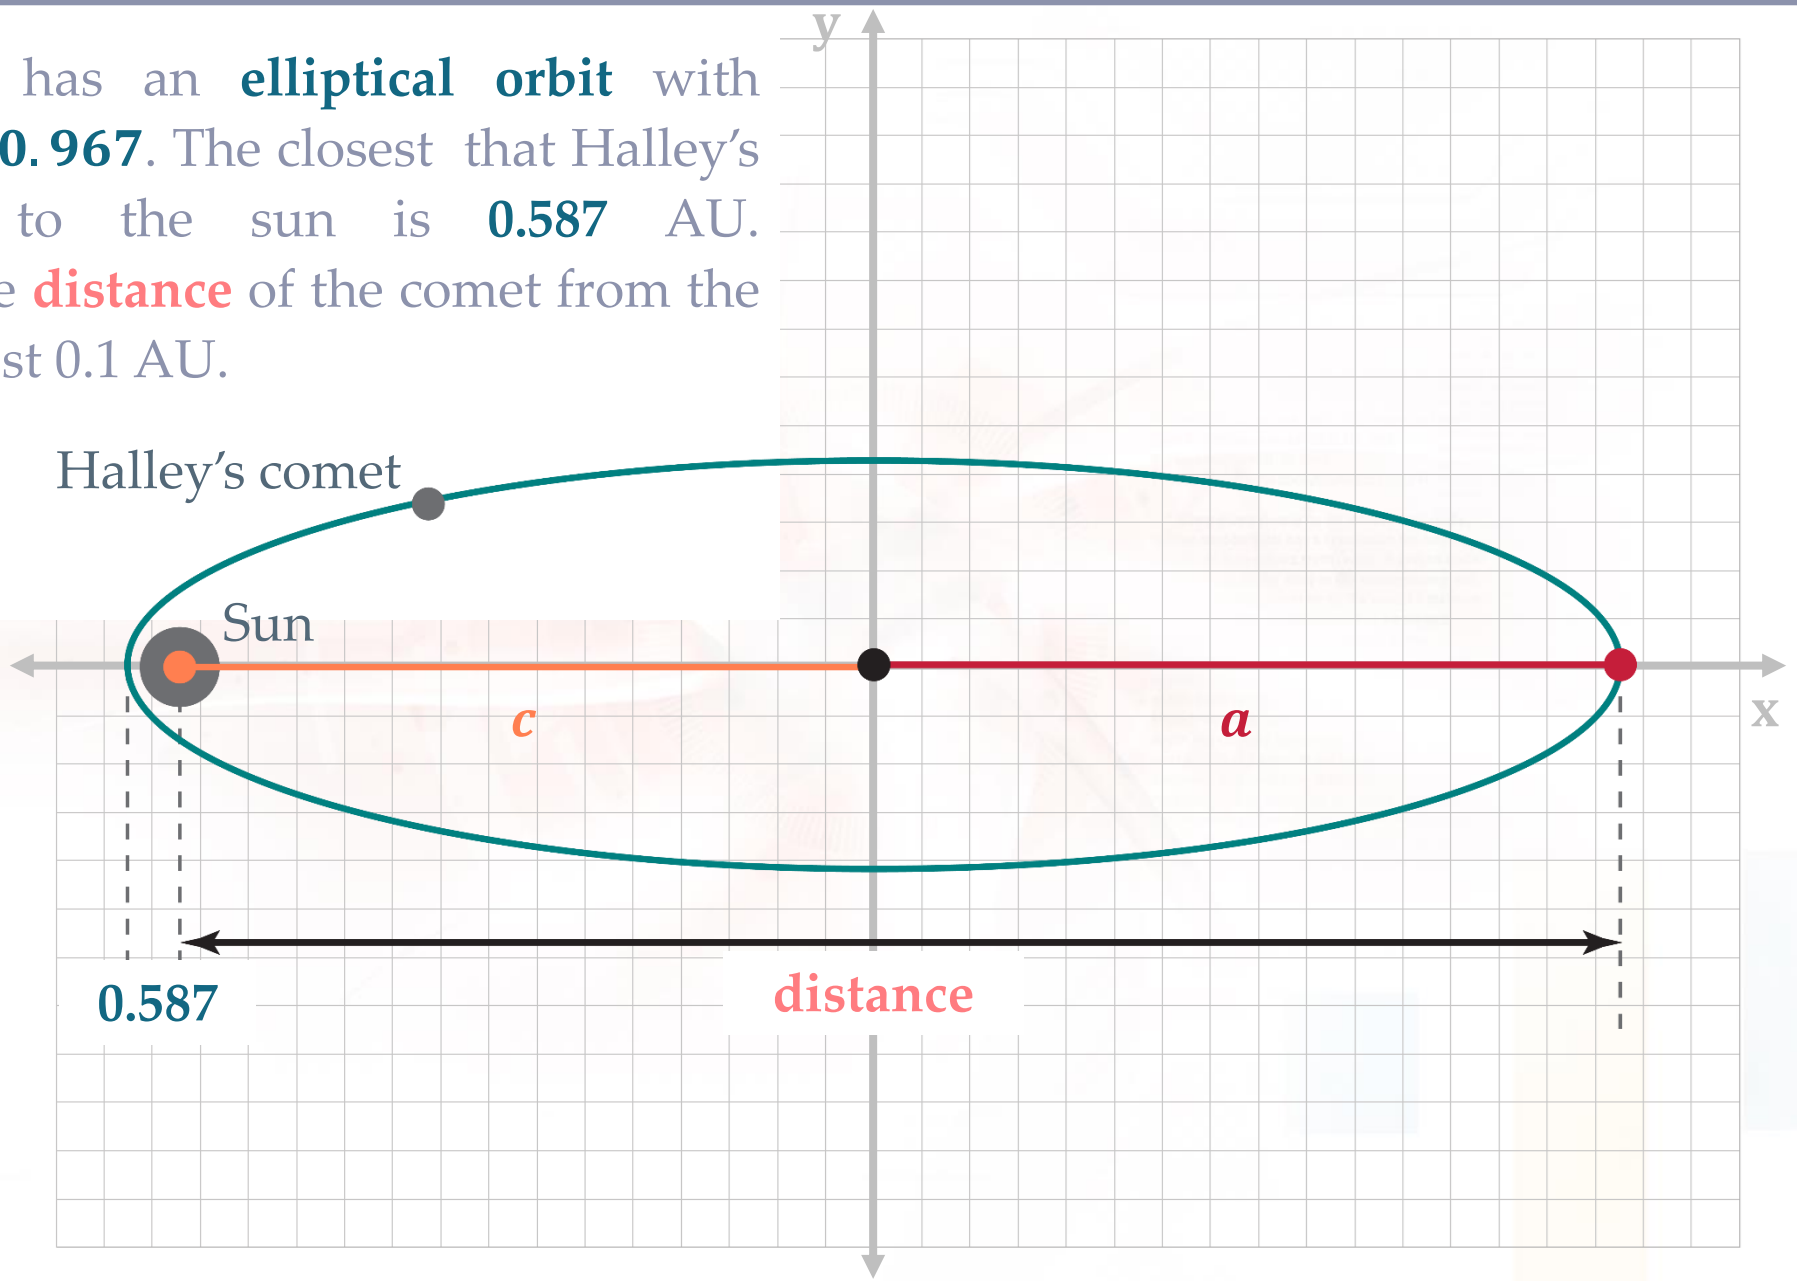
$$\boldsymbol{e = \frac{c}{a}}$$

$$\boldsymbol{e = \frac{\sqrt{a^2 - b^2}}{a}}$$





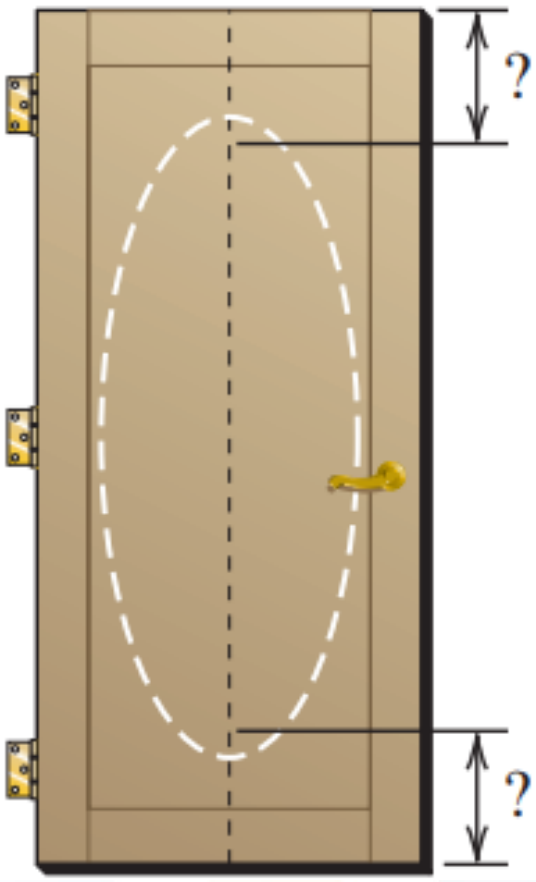
Halley's comet has an **elliptical orbit** with eccentricity $\boldsymbol{e = 0.967}$. The closest that Halley's comet comes to the sun is **0.587** AU. Approximate the **distance** of the comet from the sun, to the nearest 0.1 AU.



SEATWORK

1. Find the **vertices** and **foci** of the ellipse

   $\mathbf{25x^2 + 4y^2 - 250x - 16y + 541 = 0}$.

2. Find an **equation** of the ellipse that has its center at the **origin** with **eccentricity** $\mathbf{\frac{3}{4}}$ and vertices $\boldsymbol{V(0, \pm 4)}$.


3. An artist plans to create an **elliptical** design with **major axis 60"** and **minor axis 24"** , centered on a door that measures **80" by 36"** , using the method described by the given figure. On a vertical line that bisects the door, approximately how far from each end of the door should the **pushpins** be inserted?
