# TOPIC OUTLINE

## t-Distribution

# T-DISTRIBUTION

# T-DISTRIBUTION

The t-distribution (Student's t-Distribution) is used to calculate the confidence interval when:

1. The population variance ( $\sigma^2$ ) is unknown.
2. The sample size is small ( $n < 30$ ).

Formula:

$$CI = \bar{x} \pm t_{n-1, \alpha/2} \left( \frac{s}{\sqrt{n}} \right)$$

where:

$\bar{x}$  = sample mean

$t_{n-1, \alpha/2}$  = t-statistic

$\frac{s}{\sqrt{n}}$  = standard error

t-table

d.f. / $\alpha$	0.1	0.05	0.025	0.01	0.005

## EXERCISE

---

A power company measures the voltage output (in volts) of a batch of transformers. A random sample of **10** transformers is tested, and their voltage outputs are recorded in "transformer-voltage-data-10-samples" dataset . Calculate a **95% confidence interval** for the true mean voltage output ( $\mu$ ) of all transformers.
