DISTRIBUTION

INFERENCEAL STATISTICS

Inferential statistics is a branch of statistics that uses sample data to draw conclusions (inferences) about a population.

Normal Distribution

DISTRIBUTION

Distribution or the probability distribution describes the probabilities or frequencies of different outcomes in an experiment or observed data.

Rolling one die

Outcome	Probability
1	1/6 or 0.17
2	1/6 or 0.17
3	1/6 or 0.17
4	1/6 or 0.17
5	1/6 or 0.17
6	1/6 or 0.17
7 (all else)	0

Sum of probabilities = 1 or 100%

2	1/6 or 0.17
3	1/6 or 0.17
4	1/6 or 0.17
5	1/6 or 0.17
6	1/6 or 0.17
7 (all else)	0

Sum of probabilities = 1 or 100%

HISTOGRAM

Histograms are used to visualize the shape, spread, and central tendency of data, making them a useful tool for assessing whether a dataset follows a normal distribution or deviates from it.

NORMAL DISTRIBUTION

NORMAL DISTRIBUTION

A normal distribution is a probability distribution where the values of a random variable are distributed symmetrically. Also known as Gaussian distribution or bell curve because of its shape.

Johann Carl Friedrich Gauss

NORMAL DISTRIBUTION

A normal distribution is a probability distribution where the values of a random variable are distributed symmetrically. Also known as Gaussian distribution or bell curve because of its shape.

$$N(\mu, \sigma^2)$$

NORMAL DISTRIBUTION

Bell Curve

A normal distribution is a probability distribution where the values of a random variable are distributed symmetrically. Also known as Gaussian distribution or bell curve because of its shape.

Formula

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$$

mean = median = mode
